
HEALTH SITUATION

Life expectancy at birth in Kenya has improved from a low of 45.2 years in the 1990s, to an estimated 63.2 years by 2015. There are indications of on-going improvements in the health status for infants and under 5s. According to latest figures, infant and under 5 mortality improved from 77 and 115 in the 1990s to 39 and 49 per 1000 live births respectively in 2014. Maternal and neonatal mortality, on the other hand, had shown stagnation since 1993 but in the recent past have showed marked decreasing reaching 510/100,000 and 22/1,000 respectively in 2015. As a result, though the country was on track but did not meet its health MDG targets (4, 5 and 6). Furthermore, there are wide disparities in health status across the country, closely linked to underlying socio-economic, gender and geographical disparities.

The country’s burden of communicable diseases remains high. HIV/AIDS is responsible for up to 29.3% of all deaths and 24.2% of all disability in the country; respiratory (chest) infections including tuberculosis (14.4% of deaths) while malaria contributes 30% of the total outpatient morbidity, and is the leading cause of mortality amongst under 5’s. Although Kenya was on track to meet the MDG target for falling TB incidence (298 per 100,000 population), it did not achieve the targets for reductions in prevalence and mortality. Other major causes of death include conditions during and just after birth; as well as stroke, heart attacks, road traffic accidents and violence.

Kenya has recently experienced outbreaks of new/re-emerging conditions such as polio, viral haemorrhagic fevers (e.g. dengue) as well as other emergencies. Neglected tropical diseases such as lymphatic filariasis also remain a burden. Non-communicable diseases (NCDs) are perceived to be on the increase in Kenya, but tangible data on prevalence is minimal. According to HMIS, cardiovascular diseases and cancers are the second and third leading causes of death respectively. Prevalence of diabetes in the population aged between 20-79 years is 4.7%.

Efforts at prevention of these infections are being scaled up in the country, however diarrhoeal diseases remain one of the major causes of childhood morbidity and mortality in Kenya, particularly in areas where there are shortages of safe drinking water, adequate sanitation, malnutrition, and pollution of food sources.

HEALTH POLICIES AND SYSTEMS

The Government’s three-pillar Vision 2030 and the Second Medium Term Plan (2014-2018) aim to deliver amongst others, accelerated and inclusive economic growth, higher living standards, better education and health care, and through which Kenya aimed to attain the MDGs. The Kenya Health Policy (2014-2030) defines the Country’s long term intent in health. The overall objective of this policy will be to attain universal coverage with critical services that positively contribute to the realization of the overall policy goal. The target of the policy is to attain a level and distribution of health at a level commensurate with that of a middle income country, with specific impact targets of attaining a 16% improvement in life expectancy; a 50% reduction in annual mortality from all causes; and a 25% reduction in time spent in ill health.

The Right to Health for every Kenyan is affirmed through a recent comprehensive Bill of Rights. Governance structures fundamentally changed from a previously centralized structure to a two-tier system comprising the National Government and 47 devolved County Governments. The counties are the units of service delivery and resource allocation. The national government and healthcare delivery systems to align with the Constitution. A health bill is under development to consolidate, harmonize and update all health related legislation, and to align it with the Constitution.

In addition to the many interventions and investments introduced to address the high burden of communicable diseases and contribute to the overall improvement in health; Kenya had also ratified theFTCT and made some inroads in its implementation, especially in the areas of control of smoking in public places, and advertising, sponsorship and promotion. A STEPS Survey and a global youth tobacco survey have been concluded. The surveys showed that thirteen percent of Kenyans currently consume some form of tobacco products with a significantly higher prevalence among men (23.0 percent) than women (4.1 percent). While Approximately, 19.3 percent of Kenyans currently drink alcohol with 13 percent of these consuming alcohol on a daily basis. The findings of the survey have provided comprehensive information on the magnitude of NCDs in the country.

Notable challenges still need to be addressed, namely: coordination of epidemic preparedness and response, communication, skills distribution and management of human resources for health, financing of health for universal coverage, partnerships framework and instruments for effective devolved health system.

COOPERATION FOR HEALTH

The Government, in its 2nd Medium Term Plan (MTP 2, 2014 – 2018) has highlighted the need to adhere to aid effectiveness and partnership principles. The health sector in the country currently has a number of active partners supporting interventions. These include State, international and a large number of state-assigned actors mostly involved in supporting delivery of health services in Vaccine Preventable Diseases, Health Systems pillars, HIV, TB and Malaria related interventions.

The country has in the past experienced relatively unpredictable flows of international aid. The increasing aid assistance since 2008/09 is not just a result of resumption of support from existing partners, but also a reflection of increasing support from non-traditional sources of aid, such as China, and other emerging economies.

The United Nations presence in the country is quite extensive, with a number of agencies having Headquarters, Regional and Country presence in Kenya. The Delivering as One approach has been adopted for the implementation of the UNDAF (2014-2018). WHO support is guided by the strategic priorities and main focus areas as contained in the third generation of CCS for the period 2014-2019.
## WHO COUNTRY COOPERATION STRATEGIC AGENDA (2014–2019)

### Strategic Priorities

<table>
<thead>
<tr>
<th>Strategic Priority</th>
<th>Main Focus Areas for WHO Cooperation</th>
</tr>
</thead>
</table>
| **STRATEGIC PRIORITY 1:** Reduce the burden of communicable diseases, including HIV/AIDS, tuberculosis, malaria, neglected tropical diseases and vaccine-preventable diseases, using disease control strategies including, prevention, treatment, elimination and eradication | - HIV: Support the development and implementation of national policies, strategies and programmes for HIV prevention, testing, treatment and care services towards universal access to HIV services.  
- Neglected Tropical Diseases (NTDs): Support Elimination or Eradication of selected NTDs by 2019 and beyond.  
- Vaccine Preventable Diseases (VPDs): Support efforts to increase coverage of vaccination services  
- Tuberculosis (TB): Support Stop TB Strategy in detection and successful treatment of tuberculosis including drug-resistant tuberculosis, multidrug-resistant tuberculosis, through and integrated services, community, civil society and private sector engagement.  
- Malaria: Support development and implementation of national policies, strategies and approaches on malaria prevention, control and elimination including the generation and use of strategic information for anti-malaria agenda setting and evidence-based targeting of anti-malaria interventions towards a Malaria free Kenya. |
| **STRATEGIC PRIORITY 2:** Halt /Stabilize and reverse the rising burden of non-Communicable conditions, injuries violence and disability through comprehensive sector wide evidence-based policy options and strategies coupled with robust monitoring and evaluation systems informed by a continuous research agenda | - Non Communicable Diseases (NCDs): Support the development and implementation of sector-wide policies, strategies and programmes including research & evidence generation, monitoring and assessing the health situation and trends to prevent and control non-communicable conditions together with their risk factors.  
- Mental Health: Support the development and implementation of strategies including early diagnosis and data systems which ensures access to services for mental health and substance use disorders  
- Violence and Injuries: Support development and implementation of comprehensive multi-sectoral national policies, strategies and plans on violence & injury prevention and control, including the generation and utilisation of research and information for violence & injury prevention agenda setting and evidence-based options to reduce the burden of injuries and violence in Kenya.  
- Disabilities and Rehabilitation: Support the development and implementation of evidence-based policies, legislations and strategies to increase access to services for people with disabilities by provision of norms and standards on rehabilitative services and monitoring access to services.  
- Nutrition: To improve nutrition & food safety throughout the life-course for public health and sustainable development |
| **STRATEGIC PRIORITY 3:** Improve health outcomes and embrace healthy lifestyles in a supportive and enabling risk mitigating environment through the course of life for improved quality of health and increased health adjusted life expectancy | - Reproductive, Maternal, Newborn, Child and Adolescent Health (RMNCAH): Support the national governments to build capacity to expand the access to quality evidence-informed interventions to improve maternal, newborn, child, adolescent, and reproductive health, whilst securing the health of older people through healthy behaviours.  
- Health Promotion: To support health and development, and prevent or reduce risk factors for health conditions using evidence-based and ethical policies, strategies, recommendations, standards, guidelines at national and sub-national levels  
- Social Determinants of Health (SDH): To facilitate the development and implementation of policies and programmes to enhance health equity through strengthened inter-sectoral collaborations and partnerships for coordinated actions addressing Social Determinants of Health (SDH) |
| **STRATEGIC PRIORITY 4:** By 2019, the Country has a responsive, client-centered, technologically driven and sustainable health system that is facilitating movement towards universal health coverage, with defined quality health and related services, with protection from catastrophic health expenditures | - Organization of Service Delivery: Support the National and County Governments in efforts to improve organization of devolved service delivery to improve physical, financial and socio-cultural access to health and related services, with a focus on organization of the health service package, the health system, health infrastructure, community health, facility management, emergency / referral, outreach, and supervision services  
- Health Workforce: Support National and County Governments efforts to improve the production, productivity, motivation retention and distribution of the health workforce required to attain universal health coverage  
- Health Information: Support National and County Governments efforts to generate, analyse, disseminate and use comprehensive health information from routine health statistics, vital statistics, surveys, census, and research  
- Essential Health Products and Technologies: Support the National and County Governments to improve access to essential medicines and health technologies; and to strengthen national and regional regulatory capacity  
- Health Financing: Facilitate the country in defining, applying and monitoring approaches to assure efficient and equitable use of health finances, in a manner that assures social protection  
- Health Leadership: Support National and County Governments to build capacity for leading the health agenda, in line with attaining the policy and strategic objectives for health |
| **STRATEGIC PRIORITY 5:** Have adequate capacity for disaster preparedness, surveillance, and effective response to disease outbreaks, acute public health emergencies and the effective management of health-related aspects of humanitarian disasters to contribute to health security. | - Disaster risk management: Support the development of national capacities for disaster risk management, including the effective management of health related aspects of humanitarian disasters.  
- Alert and response capacities: Support and focus will continue towards developing, maintaining and exercising policy, strategies and technical guidance, information management, communication and operational systems needed at National and County levels to detect, verify, assess and coordinate the response to important Public health hazards, risks and events according to 2005 international health regulations (IHR) requirements  
- Epidemic pandemic and crisis response: Focused support towards (i) implementation of relevant international frameworks for Pandemic Influenza Preparedness Framework for the sharing of influenza viruses and access to vaccines and other benefits (ii) Establishing mechanisms of response for emerging, re-emerging and established epidemic-prone diseases /conditions.  
- Polio eradication: To support complete eradication of polio and attain polio free certification status. |
