INTEGRATED MANAGEMENT OF CHILDHOOD ILLNESS FOR HIGH HIV SETTINGS

CHILD AGED 2 MONTHS UP TO 5 YEARS: ASSESS AND CLASSIFY THE SICK CHILD
Assess, Classify and Identify Treatment

Check for General Danger Signs .................................... 2
Then Ask About Main Symptoms:
Does the child have cough or difficult breathing? ........... 2
Does the child have diarrhoea? ................................. 3
Does the child have fever? .............................. 4
Does the child have an ear problem? ......................... 5
Then Check for Malnutrition and Anaemia .................... 6
Then Check for HIV Infection ........................................ 7
Then Check for Mound and Gum Conditions ................. 8
Then Check the Child’s Immunization Status .............. 9
Assess Other Problems............................................... 9
Then Establish HIV Infection Status........................... 10
WHO Paediatric clinical staging for HIV
e é é é é é . 11
HIV testing for the exposed child é é é é é é é é é é é é é 10

TREAT THE CHILD
Teach the mother to give oral drugs at home:

Oral Antibiotic .......................................................... 12
Ciprofloxacin ............................................................ 12
Co-trimoxazole ......................................................... 11
Pain Relief .................................................................. 13
Iron ......................................................................... 13
Co-artemether ........................................................... 13
Bronchodilator ........................................................... 13

Teach the Mother to Treat Local Infections at Home
Clear the ear by dry wicking and give eardrops ... 14
Then check for Mound and Gum Conditions ................. 8

Give Preventive Treatments in Clinic
Vitamin A é é é é é é é é é é é é é é é é é é é é é é .... 15
Mebendazole é é é é é é é é é é é é é é é é é é é é é é ........................................ 15

Give Emergency Treatment in Clinic only
Quinine for severe malaria ........................................... 16
Intramuscular Antibiotic ............................................... 16
Diazepam for convulsions é é é é é é é é é é é é ... 16
Treat low blood sugar .................................................. 17

TREAT THE CHILD, continued
Give Extra Fluid for Diarrhoea and Continue Feeding
Plan A: Treat for Diarrhoea at Home .......................18
Plan B: Treat for Some Dehydration with ORS ........18
Plan C: Treat for Severe Dehydration Quickly ..........19

Give Follow-up Care
Pneumonia ................................................................... 20
Dysentery ................................................................. 20
Persistent diarrhoea .................................................. 20
Malaria ...................................................................... 21
Fever; malaria unlikely ........................................... 21
Measles with eye or mouth complications é é é é é 21
Ear Infection .............................................................. 22
Feeding problem ...................................................... 22
Anaemia ................................................................. 22
Very Low Weight ...................................................... 22
Treat the young infant to prevent low blood sugar
Follow up care for child with possible HIV
treatment / suspected symptomatic /confirmed HIV . 23

COUNSEL THE MOTHER
Assess the feeding of sick infants ............................... 24
Feeding Recommendations ......................................... 25
Counsel the mother about feeding and HIV:
Feeding advice for the HIV confirmed ................. 26
Stopping breastfeeding for HIV exposed ............... 26
AFASS criteria for stopping breastfeeding ............. 26
Counsel the mother about feeding Problems ........... 27
Feeding Recommendations for HIV exposed child ... 28
Counsel the mother about her own health ............. 29
Advise mother to increase fluids during illness .......... 30

Plan C: Treat for Severe Dehydration Quickly ..........19

Treat the young infant:
Feeding Recommendations for HIV exposed child ....28
Counsel the mother about feeding Problems ........... 27
Advise mother to increase fluids during illness .......... 30

Plan B: Treat for Some Dehydration with ORS ........18

Advise mother when to return to health worker é é é 30
Advise mother when to return immediately ............ 30

Plan A: Treat for Diarrhoea at Home .......................18

SICK YOUNG INFANT AGED UP TO 2 MONTHS
ASSESS, CLASSIFY AND TREAT THE SICK YOUNG INFANT
Assess, Classify and Identify Treatment
Check for Severe Disease and Local Infection é é é é é é é é é é é é é é é é é é é é é é é 31
Then check for jaundice é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é é
**ASSESS AND CLASSIFY THE SICK CHILD AGED 2 MONTHS UP TO 5 YEARS**

**ASSESS**

**ASK THE MOTHER WHAT THE CHILD’S PROBLEMS ARE**
- Determine whether this is an initial or follow-up visit for this problem.
  - if follow-up visit, use the follow-up instructions on TREAT THE CHILD chart
  - if initial visit, assess the child as follows:

**CHECK FOR GENERAL DANGER SIGNS**

<table>
<thead>
<tr>
<th>ASK:</th>
<th>LOOK:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Is the child able to drink or breastfeed?</td>
<td>See if the child is lethargic or unconscious.</td>
</tr>
<tr>
<td>Does the child vomit everything?</td>
<td>Is the child convulsing now?</td>
</tr>
<tr>
<td>Has the child had convulsions?</td>
<td></td>
</tr>
</tbody>
</table>

A child with any general danger sign needs URGENT attention; complete the assessment and any pre-referral treatment immediately so that referral is not delayed.

**THEN ASK ABOUT MAIN SYMPTOMS:**

**Does the child have cough or difficult breathing?**

**IF YES,** ASK:

**LOOK, LISTEN, FEEL:**

- For how long?
- Count the breaths in one minute.
- Look for chest indrawing.
- Look and listen for stridor.
- Look and listen for wheezing.

**If wheezing and either fast breathing or chest indrawing:**

Give a trial of rapid acting inhaled bronchodilator for up to three times 15-20 minutes apart. Count the breaths and look for chest indrawing again, and then classify.

**CHILD MUST BE CALM**

**If the child is:**

- Fast breathing is:
  - 2 months up to 12 months: 50 breaths per minute or more
  - 12 months up to 5 years: 40 breaths per minute or more

**CLASSEIFY AS**

**SIGNS**

| Any general danger sign or |
| Chest indrawing or |
| Stridor in calm child |

**CLASSIFY AS**

<table>
<thead>
<tr>
<th>SEVERE PNEUMONIA OR VERY SEVERE DISEASE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Give first dose of an appropriate antibiotic</td>
</tr>
<tr>
<td>Refer URGENTLY to hospital</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Fast breathing</th>
</tr>
</thead>
<tbody>
<tr>
<td>PNEUMONIA</td>
</tr>
<tr>
<td>Give oral antibiotic for 5 days</td>
</tr>
<tr>
<td>If wheezing (even if it disappeared after rapidly acting bronchodilator) give an inhaled bronchodilator for five days*</td>
</tr>
<tr>
<td>Soothe the throat and relieve the cough with a safe remedy</td>
</tr>
<tr>
<td>If coughing for more than 3 weeks or if having recurrent wheezing, refer for assessment for TB or asthma</td>
</tr>
<tr>
<td>Advise the mother when to return immediately</td>
</tr>
<tr>
<td>Follow-up in 2 days</td>
</tr>
</tbody>
</table>

| No signs of pneumonia or very severe disease |
| COUGH OR COLD |
| If wheezing (even if it disappeared after rapidly acting bronchodilator) give an inhaled bronchodilator for 5 days* |
| Soothe the throat and relieve cough with a safe remedy |
| If coughing for more than 3 weeks or if having recurrent wheezing, refer for assessment for TB or asthma |
| Advise mother when to return immediately |
| Follow up in 5 days if not improving |

* In settings where inhaled bronchodilator is not available, oral salbutamol may be the second choice.

**TREATMENT**

(Urgent pre-referral treatments are in bold print)
**Does the child have diarrhoea?**

**LOOK AND FEEL:**
- **IF YES, ASK:**
  - For how long?
  - Is there blood in the stool?
- **ASK:**
  - Look at the child's general condition.
  - Is the child:
    - Lethargic or unconscious?
    - Restless and irritable?
  - Look for sunken eyes.
  - Offer the child fluid. Is the child:
    - Not able to drink or drinking poorly?
    - Drinking eagerly, thirsty?
  - Pinch the skin of the abdomen. Does it go back:
    - Very slowly (longer than 2 seconds)?
    - Slowly?

**Classify DIARRHOEA**

**for DEHYDRATION**
- Two of the following signs:
  - Lethargic or unconscious
  - Sunken eyes
  - Not able to drink or drinking poorly
  - Skin pinch goes back very slowly.

**SEVERE DEHYDRATION**
- ü If child has no other severe classification:
  - Give fluid for severe dehydration (Plan C)
  - OR
  - If child also has another severe classification:
  - Refer URGENTLY to hospital with mother giving frequent sips of ORS on the way
  - Advise the mother to continue breastfeeding
- ü If child is 2 years or older and there is cholera in your area, give antibiotic for cholera

**SOME DEHYDRATION**
- Two of the following signs:
  - Restless, irritable
  - Sunken eyes
  - Drinks eagerly, thirsty
  - Skin pinch goes back slowly

**NO DEHYDRATION**
- Not enough signs to classify as some or severe dehydration
- ü Give fluid, zinc supplements and food for some dehydration
  (Plan B)
- ü If child also has a severe classification:
  - Refer URGENTLY to hospital with mother giving frequent sips of ORS on the way
  - Advise the mother to continue breastfeeding
  - ü Advise mother when to return immediately
  - ü Follow-up in 5 days if not improving.

**SEVERE PERSISTENT DIARRHOEA**
- ü Treat dehydration before referral unless the child has another severe classification
- ü Refer to hospital

**PERSISTENT DIARRHOEA**
- ü Check for HIV Infection
- ü Advise the mother on feeding a child who has PERSISTENT DIARRHOEA
- ü Give multivitamins and minerals including zinc for 14 days
- ü Follow up in 5 days

**DYSENTERY**
- ü Give ciprofloxacin for 3 days
- ü Follow-up in 2 days

**If referral is not possible, manage the child as described in Integrated Management of Childhood Illness, Treat the Child, Annex: Where Referral Is Not Possible, and WHO guidelines for inpatient care.**
# Does the child have fever?

(by history or feels hot or temperature 37.5°C* or above)

## Decide Malaria Risk: high or low

**IF YES:**

Decide Malaria Risk: high or low

**THEN ASK:**

- For how long?
- If more than 7 days, has fever been present every day?
- Has the child had measles within the last 3 months?

## Classify FEVER

### HIGH MALARIA RISK

- Any general danger sign or
  - Stiff neck.
- Look and feel for:
  - Look or feel for stiff neck.
  - Look for signs of MEASLES
    - Generalized rash and
    - One of these: cough, runny nose, or red eyes.

#### VERY SEVERE FEBRILE DISEASE

- Give quinine for severe malaria (first dose)
- Give first dose of an appropriate antibiotic
- Treat the child to prevent low blood sugar
- Give one dose of paracetamol in clinic for high fever (38.5°C or above)
- Refer URGENTLY to hospital

#### MALARIA

- Fever (by history or feels hot or temperature 37.5°C** or above)
- Give oral co-artemether or other recommended antimalarial
- Give one dose of paracetamol in clinic for high fever (38.5°C or above)
- Advise mother when to return immediately
- Follow-up in 2 days if fever persists
- If fever is present every day for more than 7 days, refer for assessment

### LOW MALARIA RISK

- Any general danger sign or
  - Stiff neck.
- Look and feel for:
  - Look for mouth ulcers.
  - Look for signs of MEASLES
    - Generalized rash and
    - One of these: cough, runny nose, or red eyes.

#### VERY SEVERE FEBRILE DISEASE

- Give one dose of paracetamol in clinic for high fever (38.5°C or above)
- Refer URGENTLY to hospital

#### FEVER - MALARIA UNLIKELY

- Runny nose PRESENT or
  - Measles PRESENT or
  - Other cause of fever PRESENT

- No runny nose and
  - No measles and
  - No other cause of fever

#### MEASLES WITH EYE OR MOUTH COMPLICATIONS***

- If pus draining from the eye, treat eye infection with tetracycline eye ointment
- If if mouth ulcers, treat with gentian violet
- Follow-up in 2 days.

#### MEASLES

- Give Vitamin A treatment

---

**These temperatures are based on axillary temperature. Rectal temperature readings are approximately 0.5°C higher.

*** Other important complications of measles - pneumonia, stridor, diarrhoea, ear infection, and malnutrition - are classified in other tables.
<table>
<thead>
<tr>
<th><strong>IF YES, ASK:</strong></th>
<th><strong>LOOK AND FEEL:</strong></th>
<th><strong>CLASSIFY EAR PROBLEM</strong></th>
<th><strong>MASTOIDITIS</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Is there ear pain?</td>
<td>Look for pus draining from the ear.</td>
<td>Tender swelling behind the ear.</td>
<td>Give first dose of an appropriate antibiotic.</td>
</tr>
<tr>
<td>Is there ear discharge?</td>
<td>Feel for tender swelling behind the ear.</td>
<td>Pus is seen draining from the ear and discharge is reported for less than 14 days, or</td>
<td>Give paracetamol for pain.</td>
</tr>
<tr>
<td>If yes, for how long?</td>
<td></td>
<td>Ear pain.</td>
<td>Dry the ear by wicking.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>If ear discharge, check for HIV Infection</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Follow-up in 5 days.</td>
</tr>
</tbody>
</table>

**ACUTE EAR INFECTION**
- Give an antibiotic for 5 days.
- Give paracetamol for pain.
- Dry the ear by wicking.
- If ear discharge, check for HIV Infection
- Follow-up in 5 days.

**CHRONIC EAR INFECTION**
- Dry the ear by wicking.
- Treat with topical quinolone eardrops for 2 weeks
- Check for HIV Infection
- Follow-up in 5 days.

**NO EAR INFECTION**
- No treatment.
THEN CHECK FOR MALNUTRITION AND ANAEMIA

CHECK FOR MALNUTRITION

**LOOK AND FEEL:**
1. Look for visible severe wasting
2. Look for oedema of both feet
3. Determine weight for age

**CLASSIFY NUTRITIONAL STATUS**

<table>
<thead>
<tr>
<th>Look and FEEL:</th>
<th>SEVERE MALNUTRITION</th>
<th>VERY LOW WEIGHT</th>
<th>NOT VERY LOW WEIGHT</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visible severe wasting or oedema of both feet</td>
<td>Treat the child to prevent low sugar</td>
<td>Refer URGENTLY to a hospital</td>
<td></td>
</tr>
<tr>
<td>Very low weight for age</td>
<td>Assess the child's feeding and counsel the mother on feeding according to the feeding recommendations</td>
<td>If feeding problem, follow-up in 5 days</td>
<td></td>
</tr>
<tr>
<td>Not very low weight for age and no other signs of malnutrition</td>
<td>If child is less than 2 years old, assess the child's feeding and counsel the mother on feeding according to the feeding recommendations</td>
<td>- If feeding problem, follow-up in 5 days</td>
<td></td>
</tr>
</tbody>
</table>

CHECK FOR ANAEMIA

**LOOK and FEEL:**
1. Look for palmar pallor. Is it:
   - Severe palmar pallor?
   - Some palmar pallor?

**CLASSIFY ANAEMIA**

<table>
<thead>
<tr>
<th>Look and FEEL:</th>
<th>SEVERE ANAEMIA</th>
<th>ANAEMIA</th>
<th>NO ANAEMIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Severe palmar pallor</td>
<td>Refer URGENTLY to hospital</td>
<td>Give iron</td>
<td>If child is less than 2 years old, assess the child's feeding and counsel the mother on feeding according to the feeding recommendations</td>
</tr>
<tr>
<td>Some palmar pallor</td>
<td></td>
<td>Give oral antimalarial if high malaria risk</td>
<td>- If feeding problem, follow-up in 5 days</td>
</tr>
<tr>
<td>No palmar pallor</td>
<td></td>
<td>Check for HIV infection</td>
<td>- If feeding problem, follow-up in 5 days</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Give mebendazole if child is 1 year or older and has not had a dose in the previous six months</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>If child is less than 2 years old, assess the child's feeding and counsel the mother on feeding according to the feeding recommendations</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>- If feeding problem, follow-up in 5 days</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Advise mother when to return immediately</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Follow up in 14 days</td>
<td></td>
</tr>
</tbody>
</table>
THEN ASSESS FOR HIV INFECTION**

- Has the mother or child had an HIV test?
- OR
- Does the child have one or more of the following
  - Pneumonia **
  - Persistent diarrhoea **
  - Ear discharge (acute or chronic)
  - Very low weight for age**

If yes to one of the two questions above, enter the box below and look for the following conditions suggesting HIV infection:

NOTE OR ASK:

- PNEUMONIA ?
- PERSISTENT DIARRHOEA?
- EAR DISCHARGE?
- VERY LOW WEIGHT?

HIV test result available for mother/child?

LOOK and FEEL:

- Oral thrush
- Parotid enlargement
- Generalized persistent lymphadenopathy

**A child who is on ART does not need to enter this HIV box.

* Includes severe forms such as severe pneumonia. In the case of severe forms, complete assessment quickly and refer child URGENTLY.

*A child with these classifications or on ART, assess for mouth and gum conditions as in next page.
Deep or extensive ulcers of mouth or gums or Not able to eat

SEVERE GUM OR MOUTH INFECTION
- Refer URGENTLY to hospital
- If possible, give first dose acyclovir pre-referral.
- Start metronidazole if referral not possible
- If child is on antiretroviral therapy this may be a drug reaction so refer to second level for assessment.

Ulcers of mouth or gums

GUM OR MOUTH ULCERS
- Show mother how to clean the ulcers with saline or peroxide or sodium bicarbonate.
- If lips or anterior gums involved, give acyclovir, if possible. If not possible, refer.
- If child receiving cotrimoxazole or antiretroviral drugs or isoniazid (INH) prophylaxis (for TB) within the last month, this may be a drug rash, especially of the child also has a skin rash, so refer.
- Provide pain relief.
- Follow up in 7 days.

No ulcers of the mouth or gums

NO GUM OR MOUTH ULCERS
- Treat, counsel and follow up existing infections.
- Advise the mother about feeding and about her own health.

THEN CHECK THE CHILD’S IMMUNIZATION, VITAMIN A SUPPLEMENTATION

VITAMIN A SUPPLEMENTS

<table>
<thead>
<tr>
<th>AGE*</th>
<th>VITAMIN A</th>
</tr>
</thead>
<tbody>
<tr>
<td>9-12 months</td>
<td>dose 1</td>
</tr>
<tr>
<td>15-18 months</td>
<td>dose 2</td>
</tr>
<tr>
<td>21-24 months</td>
<td>dose 3</td>
</tr>
<tr>
<td>27-30 months</td>
<td>dose 4</td>
</tr>
<tr>
<td>33-36 months</td>
<td>dose 5</td>
</tr>
<tr>
<td>39-42 months</td>
<td>dose 6</td>
</tr>
<tr>
<td>45-48 months</td>
<td>dose 7</td>
</tr>
<tr>
<td>51-54 months</td>
<td>dose 8</td>
</tr>
<tr>
<td>57-60 months</td>
<td>dose 9</td>
</tr>
</tbody>
</table>

*Give vitamin A only if no dose in last six months has been given

ASSESS OTHER PROBLEMS

ASSESS MOTHER’S OWN HEALTH
**ASSESS OTHER PROBLEMS:**

**MAKE SURE CHILD WITH ANY GENERAL DANGER SIGN IS REFERRED** after first dose of an appropriate antibiotic and other urgent treatments.

**VITAMIN A SUPPLEMENTATION**

Give every child a dose of Vitamin A every six months from the age of 6 months. Record the dose on the child’s card.

Same protocol for HIV-exposed and infected children.

**ROUTINE WORM TREATMENT**

Give every child mebendazole every 6 months from the age of one year. Record the dose on the child’s card.

Same protocol for HIV exposed and infected children.

**IMMUNIZATION SCHEDULE:** Follow national guidelines

<table>
<thead>
<tr>
<th>Age</th>
<th>VACCINE</th>
<th>HIV-EXPOSED</th>
<th>HIV-INFECTED</th>
</tr>
</thead>
<tbody>
<tr>
<td>Birth</td>
<td>BCG</td>
<td>BCG*</td>
<td>NO BCG</td>
</tr>
<tr>
<td>6 weeks</td>
<td>DPT+HIB-1</td>
<td>Same</td>
<td>Same</td>
</tr>
<tr>
<td>10 weeks</td>
<td>DPT+HIB-2</td>
<td>Same</td>
<td>Same</td>
</tr>
<tr>
<td>14 weeks</td>
<td>DPT+HIB-3</td>
<td>Same</td>
<td>Same</td>
</tr>
<tr>
<td>9 months</td>
<td>Measles**</td>
<td>Measles at 6 months</td>
<td>Same***</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Repeat at or after 9 months</td>
<td>Same***</td>
</tr>
</tbody>
</table>

*BCG should NOT be given* any time after birth to infants known to be HIV infected or born to HIV infected women and HIV status unknown but who have signs or reported symptoms suggestive of HIV infection.

** Second dose of measles vaccine may be given at any opportunistic moment during periodic supplementary immunisation activities as early as one month following the first dose..**

*** Measles vaccine is NOT given if child is severely immunocompromised due to HIV infection.
ESTABLISH HIV INFECTION STATUS

RECOMMEND HIV testing for:
- All children born to an HIV positive mother
- All sick children with symptomatic suspected HIV infection
- All children brought for child health service in a generalized epidemic setting

For children > 18 months, a positive HIV antibody test result means the child is infected.

For HIV exposed children <18 months of age,
- If PCR or other virological test is available, test from 6 weeks of age
  - A positive result means the child is infected
  - A negative result means the child is not infected, but could become infected if they are still breastfeeding

- If PCR or other virological test not available, use HIV antibody test.
  - A positive result is consistent with the fact that the child has been exposed to HIV, but does not tell us if the child is definitely infected.

Interpreting the HIV antibody test results in a child < 18 months of age

<table>
<thead>
<tr>
<th>Test result</th>
<th>HIV antibody test is positive</th>
<th>HIV antibody test is negative</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not breastfeeding or not breastfed in</td>
<td>HIV exposed and /or HIV infected Manage as if they could be infected. Repeat test at 18 months</td>
<td>HIV negative Child is not HIV infected</td>
</tr>
<tr>
<td>last 6 weeks</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Breast feeding</td>
<td>HIV exposed and /or HIV infected Manage as if they could be infected. Repeat test at 18 months or once breastfeeding has been discontinued for more than 6 weeks</td>
<td>Child can still be infected by breastfeeding. Repeat test once breastfeeding has been discontinued for more than 6 weeks.</td>
</tr>
</tbody>
</table>

1. The older the child is the more likely the HIV antibody is due to their own infection and not due to maternal antibody
2. Very exceptionally a very severely sick child who is HIV infected will have HIV antibody test results that are negative. If the clinical picture strongly suggests HIV, then virological testing will be needed.
**WHO PAEDIATRIC CLINICAL STAGING OF HIV**

Has the child been confirmed HIV Infected?
(If yes, perform clinical staging: any one condition in the highest staging determines stage. If no, you cannot stage the patient)¹

<table>
<thead>
<tr>
<th>WHO Paediatric Clinical Stage 1 - Asymptomatic</th>
<th>WHO Paediatric Clinical Stage 2 - Mild Disease</th>
<th>WHO Paediatric Clinical Stage 3 - Moderate Disease</th>
<th>WHO Paediatric Clinical Stage 4 - Severe Disease (AIDS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Growth</td>
<td>“”</td>
<td>Moderate unexplained malnutrition not responding to standard therapy</td>
<td>Severe unexplained wasting or stunting or Severe malnutrition not responding to standard therapy</td>
</tr>
<tr>
<td>Symptoms/ signs</td>
<td>No symptoms or only:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Persistent Generalized Lymphadenopathy (PGL)</td>
<td>ü Unexplained persistent enlarged liver and/or spleen</td>
<td>ü Oral thrush (outside neonatal period)</td>
<td>ü Oesophageal thrush</td>
</tr>
<tr>
<td></td>
<td>ü Unexplained persistent enlarged parotid</td>
<td>ü Oral hairy leukoplaikia</td>
<td>ü More than one month of herpes simplex ulcerations</td>
</tr>
<tr>
<td></td>
<td>ü Skin conditions (prurigo, seborrheic dermatitis, extensive molluscum contagiosum or warts, fungal nail infections, herpes zoster)</td>
<td>ü Unexplained and unresponsive to standard therapy: ü Diarrhoea &gt;14 days ü Fever &gt;1 month ü Thrombocytopenia* (&lt;50,000/mm³ for &gt; 1 month) ü Neutropenia* (&lt;500/mm³ for 1 month) ü Anaemia for &gt;1 month (haemoglobin &lt; 8 g/dl)*</td>
<td>ü Severe multiple or recurrent bacterial infections ≥ 2 episodes in a year (not including pneumonia)</td>
</tr>
<tr>
<td></td>

</table>

¹ Note that these are interim recommendations and may be subject to change.

* Conditions requiring diagnosis by a doctor or medical officer – should be referred for appropriate diagnosis and treatment

** In a child with presumptive diagnosis of severe HIV disease and ART initiated, HIV infection should be confirmed as soon as possible.
TREAT THE CHILD
CARRY OUT THE TREATMENT STEPS IDENTIFIED ON
THE ASSESS AND CLASSIFY CHART

TEACH THE MOTHER TO GIVE ORAL DRUGS AT HOME

Follow the instructions below for every oral drug to be given at home. Also follow the instructions listed with each drug’s dosage table.

- Determine the appropriate drugs and dosage for the child’s age or weight
- Tell the mother the reason for giving the drug to the child
- Demonstrate how to measure a dose
- Watch the mother practise measuring a dose by herself
- Ask the mother to give the first dose to her child
- Explain carefully how to give the drug, then label and package the drug. If more than one drug will be given, collect, count and package each drug separately
- Explain that all the tablets or syrup must be used to finish the course of treatment, even if the child gets better
- Check the mother’s understanding before she leaves the clinic

Give Co-trimoxazole to Children with Confirmed or Suspected HIV Infection or Children who are HIV Exposed

- Co-trimoxazole should be given starting at 4-6 weeks of age to:
  1. All infants born to mothers who are HIV infected until HIV is definitively ruled out
  2. All infants with confirmed HIV infection aged <12 months or those with stage 2,3 or 4 disease or
  3. Asymptomatic infants or children (stage 1) if CD4 <25%
- Give co-trimoxazole once daily.

**Give an Appropriate Oral Antibiotic**

FOR PNEUMONIA, ACUTE EAR INFECTION:

- **FIRST-LINE ANTIBIOTIC:**
- **SECOND-LINE ANTIBIOTIC:**

<table>
<thead>
<tr>
<th>CO-TRIMOXAZOLE (trimethoprim / sulphamethoxazole)</th>
<th>AMOXYCILLIN*</th>
</tr>

TEACH THE MOTHER TO GIVE ORAL DRUGS AT HOME

**Give pain relief**
- Safe doses of paracetamol can be slightly higher for pain. Use the table and teach mother to measure the right dose
- Give paracetamol every 6 hours if pain persists
- If the pain is not controlled, add regular codeine 4 hourly
- For severe pain, morphine syrup can be given

### Weight and Age

<table>
<thead>
<tr>

**Give Iron**
- Give one dose daily for 14 days

### Iron/Folate Tablet
- Ferrous sulfate 200 mg + 250 μg Folate (60 mg elemental iron)

### Iron Syrup
- Ferrous fumarate 100 mg per 5 ml (20 mg elemental iron per ml)

**Give Oral Co-artemether**
- Give the first dose of co-artemether in the clinic and observe for one hour if child vomits within an hour repeat the dose. 2nd dose at home after 8 hours
- Then twice daily for further two days as shown below

### Co-artemether tablets (20mg artemether and 120 mg lumefantrine)

<table>

</table>
TEACH THE MOTHER TO TREAT LOCAL INFECTIONS AT HOME

- Explain to the mother what the treatment is and why it should be given
- Describe the treatment steps listed in the appropriate box
- Watch the mother as she gives the first treatment in the clinic (except for remedy for cough or sore throat)
- Tell her how often to do the treatment at home
- If needed for treatment at home, give mother a tube of tetracycline ointment or a small bottle of gentian violet or nystatin
- Check the mother’s understanding before she leaves the clinic

**Clear the Ear by Dry Wicking and Give Eardrops***

- Do the following 3 times daily
  - Roll clean absorbent cloth or soft, strong tissue paper into a wick
  - Place the wick in the child’s ear
  - Remove the wick when wet
  - Replace the wick with a clean one and repeat these steps until the ear is dry
  - Instil quinolone eardrops for two weeks

**Treat Mouth Ulcers with Gentian Violet (GV)**

- Treat for mouth ulcers twice daily
  - Wash hands
  - Wash the child’s mouth with a clean soft cloth wrapped around the finger and wet with salt water
  - Paint the mouth with 1/2 strength gentian violet (0.25% dilution)
  - Wash hands again
  - Continue using GV for 48 hours after the ulcers have been cured
  - Give paracetamol for pain relief

**Soothe the Throat, Relieve the Cough with a Safe Remedy**

- Safe remedies to recommend:
  - Breast milk for a breastfed infant

- Harmful remedies to discourage:

**Treat for Thrush with Nystatin**

- Treat for thrush four times daily for 7 days
  - Wash hands
  - Wet a clean soft cloth with salt water and use it to wash the child’s mouth
  - Instill nystatin 1ml four times a day
  - Avoid feeding for 20 minutes after medication
  - If breastfed check mother’s breasts for thrush. If present treat with nystatin
  - Advise mother to wash breasts after feeds. If bottle fed advise change to cup and spoon
  - If severe, recurrent or pharyngeal thrush consider symptomatic HIV (p. 7)
  - Give paracetamol if needed for pain (p.12)

**Treat Eye Infection with Tetracycline Eye Ointment**

- Clean both eyes 4 times daily.
  - Wash hands.
  - Use clean cloth and water to gently wipe away pus.
- Then apply tetracycline eye ointment in both eyes 4 times daily.
  - Squirt a small amount of ointment on the inside of the lower lid.
  - Wash hands again.
- Treat until there is no pus discharge.
- Do not put anything else in the eye.

* Quinolone eardrops may contain ciprofloxacin, norfloxacin, or ofloxacin eardrops
GIVE VITAMIN A AND MEPENDAZOLE IN CLINIC

- Explain to the mother why the drug is given
- Determine the dose appropriate for the child’s weight (or age)
- Measure the dose accurately

**Give Vitamin A**

**VITAMIN A SUPPLEMENTATION:**
- Give Vitamin A first dose any time after 6 months of age
- Thereafter give vitamin A *every six months* to ALL CHILDREN

**VITAMIN A TREATMENT:**
- Give an extra dose of Vitamin A (same dose) for *treatment* if the child has MEASLES or PERSISTENT DIARRHOEA. If the child has had a dose of Vitamin A within the past month, DO NOT GIVE.
- Always record the dose of Vitamin A given on the child’s chart

<table>
<thead>
<tr>
<th>Age</th>
<th>VITAMIN A DOSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 up to 12 months</td>
<td>100 000 IU</td>
</tr>
<tr>
<td>One year and older</td>
<td>200 000 IU</td>
</tr>
</tbody>
</table>

**Give Mebendazole**

- Give 500 mg mebendazole as a single dose in clinic if:
  - hookworm/ whipworm is a problem in your area
  - the child is 1 year of age or older, and
  - has not had a dose in the previous 6 months
GIVE THESE TREATMENTS IN THE CLINIC ONLY

- Explain to the mother why the drug is given
- Determine the dose appropriate for the child’s weight (or age)
- Use a sterile needle and sterile syringe when giving an injection
- Measure the dose accurately
- Give the drug as an intramuscular injection
- If the child cannot be referred, follow the instructions provided

Give An Intramuscular Antibiotic

- **GIVE TO CHILDREN BEING REFERRED URGENTLY**
  - Give Ampicillin (50 mg/kg) and Gentamicin (7.5 mg/kg)
  
<table>
<thead>
<tr>
<th>AGE or WEIGHT</th>
<th>AMPICILLIN 500 mg vial</th>
<th>Gentamicin 2ml vial with 40 mg/ml</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 up to 4 months</td>
<td>4 if &lt;6kg</td>
<td>1 ml</td>
</tr>
<tr>
<td>4 up to 12 months</td>
<td>6 if &lt;10kg</td>
<td>2 ml</td>
</tr>
<tr>
<td>1 up to 3 years</td>
<td>10 if &lt;15kg</td>
<td>3 ml</td>
</tr>
<tr>
<td>3 up to 5 years</td>
<td>15 if 20kg</td>
<td>5 ml</td>
</tr>
</tbody>
</table>

- If REFERRAL IS NOT POSSIBLE OR DELAYED, repeat the ampicillin injection every 6 hours and gentamicin once per day
- * Lower value for lower range of age and weight

Give Diazepam to Stop a Convulsion

- Turn the child to his/her side and clear the airway. Avoid putting things in the mouth
- Give 0.5 mg/kg diazepam injection solution per rectum using a small syringe without a needle (like a tuberculin syringe) or using a catheter
- Check for low blood sugar, then treat or prevent
- Give oxygen and REFER
- If convulsions have not stopped after 10 minutes repeat diazepam dose

<table>
<thead>
<tr>
<th>WEIGHT</th>
<th>AGE</th>
<th>DOSE OF DIAZEPAM (10mg/2mls)</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 5kg</td>
<td>&lt;6 months</td>

<td>5 - &lt;10kg</td>
<td>6 - &lt;12 months</td>
<td>1.0 ml</td>
</tr>
<tr>
<td>10 - &lt;15kg</td>
<td>1 - &lt;3 years</td>
<td>1.5 ml</td>
</tr>
<tr>
<td>15 - 19kg</td>
<td>4 - &lt;5 years</td>
<td>2.0 ml</td>
</tr>
</tbody>
</table>

Give Quinine for Severe Malaria

FOR CHILDREN BEING REFERRED WITH VERY SEVERE FEBRILE DISEASE:

- Check which quinine formulation is available in your clinic
- Give first dose of intramuscular quinine and refer child urgently to hospital

IF REFERRAL IS NOT POSSIBLE:

- Give first dose of intramuscular quinine
- The child should remain lying down for one hour
- Repeat the quinine injection at 4 and 8 hours later, and then every 12 hours until the child is able to take an oral antimalarial. Do not continue quinine injections for more than 1 week
- If low risk of malaria, do not give quinine to a child less than 4 months of age

<table>
<thead>
<tr>
<th>AGE or WEIGHT</th>
<th>INTRAMUSCULAR QUININE</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 months up to 4 months (4 - &lt; 6 kg)</td>
<td>0.4 ml</td>

<td>0.8 ml</td>
</tr>
<tr>
<td>2 years up to 3 years (12 - &lt; 14 kg)</td>
<td>1.0 ml</td>
</tr>
<tr>
<td>3 years up to 5 years (14 - 19 kg)</td>
<td>1.2 ml</td>
</tr>
</tbody>
</table>

*Quinine salt
Treat the Child to Prevent Low Blood Sugar

- If the child is able to breastfeed:
  Ask the mother to breastfeed the child

- If the child is not able to breastfeed but is able to swallow:
  1. Give expressed breast milk or breast-milk substitute
  2. If neither of these is available give sugar water
  3. Give 30-50 ml of milk or sugar water before departure

  To make sugar water: Dissolve 4 level teaspoons of sugar (20 grams) in a 200-ml cup of clean water

- If the child is not able to swallow:
  1. Give 50ml of milk or sugar water by nasogastric tube
Plan A: Treat for Diarrhoea at Home

Counsel the mother on the 4 Rules of Home Treatment:
1. Give Extra Fluid
2. Give Zinc Supplements (age 2 months up to 5 years)
3. Continue Feeding
4. When to Return

1. **GIVE EXTRA FLUID** (as much as the child will take)
   - **TELL THE MOTHER:**
     - Breastfeed frequently and for longer at each feed
     - If the child is exclusively breastfed, give ORS or clean water in addition to breast milk
     - If the child is not exclusively breastfed, give one or more of the following: food-based fluids (such as soup, rice water, and yoghurt drinks), or ORS
   - **TEACH THE MOTHER HOW TO MIX AND GIVE ORS. GIVE THE MOTHER 2 PACKETS OF ORS TO USE AT HOME.**
   - **SHOW THE MOTHER HOW MUCH FLUID TO GIVE IN ADDITION TO THE USUAL FLUID INTAKE:**
     - Up to 2 years: 50 to 100 ml after each loose stool
     - 2 years or more: 100 to 200 ml after each loose stool
     - Tell the mother to:
       - Give frequent small sips from a cup
       - If the child vomits, wait 10 minutes then continue - but more slowly
       - Continue giving extra fluid until the diarrhoea stops

2. **GIVE ZINC** (age 2 months up to 5 years)
   - **TELL THE MOTHER HOW MUCH ZINC TO GIVE (20 mg tab):**
     - 2 months up to 6 months: 1/2 tablet daily for 14 days
     - 6 months or more: 1 tablet daily for 14 days
   - **SHOW THE MOTHER HOW TO GIVE ZINC SUPPLEMENTS**
     - Infants: dissolve tablet in a small amount of expressed breast milk, ORS or clean water in a cup
     - Older children: tablets can be chewed or dissolved in a small amount of clean water in a cup

3. **CONTINUE FEEDING** (exclusive breastfeeding if age less than 6 months)

4. **WHEN TO RETURN**

---

Plan B: Treat for Some Dehydration with ORS

In the clinic, give recommended amount of ORS over 4-hour period

**DETERMINE AMOUNT OF ORS TO GIVE DURING FIRST 4 HOURS**
* Use the child’s age only when you do not know the weight. The approximate amount of ORS required (in ml) can also be calculated by multiplying the child’s weight in kg times 75.

<table>
<thead>
<tr>
<th>AGE*</th>
<th>Up to 4 months</th>
<th>4 months up to 12 months</th>
<th>12 months up to 2 years</th>
<th>2 years up to 5 years</th>
</tr>
</thead>
<tbody>
<tr>
<td>WEIGHT</td>
<td>&lt; 6 kg</td>
<td>6 - &lt; 10 kg</td>
<td>10 - &lt; 12 kg</td>
<td>12 - &lt;20 kg</td>
</tr>
<tr>
<td>Amount of fluid (ml) over 4 hours</td>
<td>200 - 450</td>
<td>450 - 800</td>
<td>800 - 960</td>
<td>960 - 1600</td>
</tr>
</tbody>
</table>

- If the child wants more ORS than shown, give more
- For infants below 6 months who are not breastfed, also give 100-200ml clean water during this period

**SHOW THE MOTHER HOW TO GIVE ORS SOLUTION:**
- Give frequent small sips from a cup
- If the child vomits, wait 10 minutes then continue - but more slowly
- Continue breastfeeding whenever the child wants

**AFTER 4 HOURS:**
- Reassess the child and classify the child for dehydration
- Select the appropriate plan to continue treatment
- Begin feeding the child in clinic

**IF THE MOTHER MUST LEAVE BEFORE COMPLETING TREATMENT:**
- Show her how to prepare ORS solution at home
- Show her how much ORS to give to finish 4-hour treatment at home
- Give her instructions how to prepare salt and sugar solution for use at home
- Explain the 4 Rules of Home Treatment:

1. **GIVE EXTRA FLUID**
2. **GIVE ZINC** (age 2 months up to 5 years)
3. **CONTINUE FEEDING** (exclusive breastfeeding if age less than 6 months)
4. **WHEN TO RETURN**
**Plan C: Treat for Severe Dehydration Quickly**

1. **Start IV fluid immediately.**
2. If the child can drink, give ORS by mouth while the drip is set up.
3. Give 100 ml/kg Ringer’s Lactate Solution (or, if not available, normal saline), divided as follows:

<table>
<thead>
<tr>
<th>AGE</th>
<th>First give 30 ml/kg in:</th>
<th>Then give 70 ml/kg in</th>
</tr>
</thead>
<tbody>
<tr>
<td>Infants (under 12 months)</td>
<td>1 hour</td>
<td>5 hours</td>
</tr>
<tr>
<td>Children (12 months up to 5 years)</td>
<td>30 minutes</td>
<td>2 1/2 hours</td>
</tr>
</tbody>
</table>

- **Reassess the child every 1-2 hours.** If hydration status is not improving, give the IV drip more rapidly.

- Also give ORS (about 5 ml/kg/hour) as soon as the child can drink: usually after 3-4 hours (infants) or 1-2 hours (children).

- Reassess an infant after 6 hours and a child after 3 hours. Classify dehydration. Then choose the appropriate plan (A, B, or C) to continue treatment.

1. **Refer URGENTLY to hospital for IV treatment.**
   - If the child can drink, provide the mother with ORS solution and show her how to give frequent sips during the trip or give ORS by naso-gastic tube.

1. **Start rehydration by tube (or mouth) with ORS solution:** give 20 ml/kg/hour for 6 hours (total of 120 ml/kg).

- **Reassess the child every 1-2 hours while waiting for transfer:**
  - If there is repeated vomiting or abdominal distension, give the fluid more slowly.
  - If the hydration status is not improving after 3 hours, send the child for IV therapy.

- After 6 hours reassess the child. Classify dehydration. Then choose the appropriate plan (A, B, or C) to continue treatment.

**NOTE:**
- If the child is not referred to hospital, observe the child at least 6 hours after rehydration to be sure the mother can maintain hydration giving the child ORS solution by mouth.

---

**GIVE EXTRA FLUID FOR DIARRHOEA AND CONTINUE FEEDING**
(See FOOD advice on COUNSEL THE MOTHER chart)
**GIVE FOLLOW-UP CARE**

- Care for the child who returns for follow-up using all the boxes that match the child’s previous classification
- If the child has any new problems, assess, classify and treat the new problem as on the ASSESS AND CLASSIFY chart

---

**PNEUMONIA**

After 2 days:
- Check the child for general danger signs.
- Assess the child for cough or difficult breathing.

Ask:
- Is the child breathing slower?
- Is there less fever?
- Is the child eating better?

Assess for HIV infection

Treatment:
- If **chest indrawing or a general danger sign**, give a dose of second-line antibiotic or intramuscular chloramphenicol. Then refer URGENTLY to hospital.
- If **breathing rate, fever and eating are the same**, change to the second-line antibiotic and advise the mother to return in 2 days or refer. (If this child had measles within the last 3 months or is known or suspected to have Symptomatic HIV Infection, refer.)
- If **breathing slower, less fever, or eating better**, complete the 5 days of antibiotic.

---

**DYSENTERY**

After 2 days:
- Assess the child for diarrhoea > See ASSESS & CLASSIFY chart

Ask:
- Are there fewer stools?
- Is there less blood in the stool?
- Is there less fever?
- Is there less abdominal pain?
- Is the child eating better?

Treatment:
- If the child is **dehydrated**, treat for dehydration.
- If **number of stools, blood in the stools, fever, abdominal pain, or eating is worse or the same**
  - Change to second-line oral antibiotic recommended for shigella in your area.
  - Give it for 5 days. Advise the mother to return in 2 days. If you do not have the second line antibiotic, refer to hospital.
  - **Exceptions**: if the child is less than 12 months old or was dehydrated on the first visit, or if he had measles within the last 3 months, REFER TO HOSPITAL.
- If **fewer stools, less fever, less abdominal pain, and eating better**, continue giving ciprofloxacin until finished.

Ensure that the mother understands the oral rehydration method fully and that she also understands the need for an extra meal each day for a week.

---

**PERSISTENT DIARRHOEA**

After 5 days:
- Has the diarrhoea stopped?
- How many loose stools is the child having per day?

Assess for HIV infection

Treatment:
- If **the diarrhoea has not stopped** (child is still having 3 or more loose stools per day) do a full assessment of the child. Treat for dehydration if present. Then REFER to hospital including for assessment for ART.
- If **the diarrhoea has stopped** (child having less than 3 loose stools per day), tell the mother to follow the usual feeding recommendations for the child’s age.
GIVE FOLLOW-UP CARE

- Care for the child who returns for follow-up using all the boxes that match the child’s previous classification
- If the child has any new problems, assess, classify and treat the new problem as on the ASSESS AND CLASSIFY chart

MALARIA (Low or High Malaria Risk)

If fever persists after 2 days, or returns within 14 days:

Do a full reassessment of the child > See ASSESS & CLASSIFY chart. Assess for other causes of fever.

Treatment:

- If the child has any general danger sign or stiff neck, treat as VERY SEVERE FEBRILE DISEASE.
- If the child has any cause of fever other than malaria, provide treatment.
- If malaria is the only apparent cause of fever:
  - Treat with the second-line oral antimalarial (if no second-line antimalarial is available, refer to hospital.) Advise the mother to return again in 2 days if the fever persists.
  - If fever has been present for 7 days, refer for assessment.

FEVER-MALARIA UNLIKELY (Low Malaria Risk)

If fever persists after 2 days:

Do a full reassessment of the child > See ASSESS & CLASSIFY chart. Assess for other causes of fever.

Treatment:

- If the child has any general danger sign or stiff neck, treat as VERY SEVERE FEBRILE DISEASE.
- If the child has any cause of fever other than malaria, provide treatment.
- If malaria is the only apparent cause of fever:
  - Treat with the first-line oral antimalarial. Advise the mother to return again in 2 days if the fever persists.
  - If fever has been present for 7 days, refer for assessment.

MEASLES WITH EYE OR MOUTH COMPLICATIONS

After 2 days:

Look for red eyes and pus draining from the eyes. Look at mouth ulcers. Smell the mouth.

Treatment for Eye Infection:

- If pus is draining from the eye, ask the mother to describe how she has treated the eye infection. If treatment has been correct, refer to hospital. If treatment has not been correct, teach mother correct treatment.
- If the pus is gone but redness remains, continue the treatment.
- If no pus or redness, stop the treatment.

Treatment for Mouth Ulcers:

- If mouth ulcers are worse, or there is a very foul smell coming from the mouth, refer to hospital.
- If mouth ulcers are the same or better, continue using half-strength gentian violet for a total of 5 days.
GIVE FOLLOW-UP CARE

- Care for the child who returns for follow-up using all the boxes that match the child's previous classification
- If the child has any new problems, assess, classify and treat the new problem as on the ASSESS AND CLASSIFY chart

**EAR INFECTION**

After 5 days:

- Reassess for ear problem. > See ASSESS & CLASSIFY chart.
- Measure the child's temperature.
- Check for HIV infection.

Treatment:

- If there is tender swelling behind the ear or high fever (38.5°C or above), refer URGENTLY to hospital.
- Acute ear infection: if ear pain or discharge persists, treat with 5 more days of the same antibiotic. Continue wicking to dry the ear. Follow-up in 5 days.
- Chronic ear infection: Check that the mother is wicking the ear correctly. Encourage her to continue.
- If no ear pain or discharge, praise the mother for her careful treatment. If she has not yet finished the 5 days of antibiotic, tell her to use all of it before stopping.

**FEEDING PROBLEM**

After 5 days:

- Reassess feeding. > See questions at the top of the COUNSEL chart.
- Ask about any feeding problems found on the initial visit.
- Counsel the mother about any new or continuing feeding problems. If you counsel the mother to make significant changes in feeding, ask her to bring the child back again.
- If the child is very low weight for age, ask the mother to return 30 days after the initial visit to measure the child's weight gain.

**VERY LOW WEIGHT**

After 30 days:

- Weigh the child and determine if the child is still very low weight for age.
- Reassess feeding. > See questions at the top of the COUNSEL chart.
- Check for HIV infection.

Treatment:

- If the child is no longer very low weight for age, praise the mother and encourage her to continue.
- If the child is still very low weight for age, counsel the mother about any feeding problem found. Ask the mother to return again in one month. Continue to see the child monthly until the child is feeding well and gaining weight regularly or is no longer very low weight for age.
  - Exception:
    - If you do not think that feeding will improve, or if the child has lost weight, refer the child.

**ANAEMIA**

After 14 days:

- Give iron. Advise mother to return in 14 days for more iron.
- Continue giving iron every 14 days for 2 months.
- If the child has palmar pallor after 2 months, refer for assessment.
GIVE FOLLOW-UP CARE FOR THE CHILD WITH POSSIBLE HIV INFECTION / HIV EXPOSED OR SUSPECTED SYMPTOMATIC OR CONFIRMED HIV INFECTION

GENERAL PRINCIPLES OF GOOD CHRONIC CARE FOR HIV-INFECTED CHILDREN
- Develop a treatment partnership with the mother and infant or child
- Focus on the mother and child’s concerns and priorities
- Use the 5 As: Assess, Advise, Agree, Assist, Arrange to guide you through the steps on chronic care consultation. Use the 5 As at every patient consultation
- Support the mother and child’s self-management
- Organize proactive follow-up
- Involve expert patients’ peer educators and support staff in your health facility
- Link the mother and child to community-based resources and support
- Use written information in registers, Treatment Plan and treatment cards to document, monitor and remind
- Work as a clinical team
- Assure continuity of care

IF POSSIBLE HIV INFECTION / HIV EXPOSED
- Follow-up in 14 days, monthly or as per national guidelines.
- Do a full re-assessment at each follow-up visit and reclassify for HIV on each follow-up visit
- Counsel about feeding practices (page 25 in chart booklet and according to the recommendations in Module 3)
- Follow co-trimoxazole prophylaxis as per national guidelines
- Follow national immunization schedule
- Follow Vitamin A supplements from 6 months of age every 6 months
- Monitor growth and development
- Virological Testing for HIV infection as early as possible from 6 weeks of age
- Refer for ARVs if infant develops severe signs suggestive of HIV
- Counsel the mother about her own HIV status and arrange counselling and testing for her if required

IF SUSPECTED SYMPTOMATIC HIV INFECTION
- Follow-up in 14 days, monthly or as per national guidelines.
- Do a full assessment and classify for common childhood illnesses, for malnutrition and feeding, skin and mouth conditions and for HIV on each visit
- Check if diagnostic HIV test has been done and if not, test for HIV as soon as possible
- Assess feeding and check weight and weight gain
- Encourage breastfeeding - mothers to continue exclusive breastfeeding
- Advise on any new or continuing feeding problems
- Initiate or follow up co-trimoxazole prophylaxis according to national guidelines
- Give immunizations according to schedule. Do not give BCG
- Give Vitamin A according to schedule
- Provide pain relief if needed
- Refer for confirmation of HIV infection and ART, if not yet confirmed

IF CHILD IS CONFIRMED HIV INFECTED*
- Follow-up in 14 days, monthly or as per national guidelines.
- Continue co-trimoxazole prophylaxis
- Follow-up on feeding
- Home care:
  - Counsel the mother about any new or continuing problems
  - If appropriate, put the family in touch with organizations or people who could provide support
  - Explain the importance of early treatment of infections or refer
  - Advise the mother about hygiene in the home, in particular when preparing food
  - Reassess for eligibility for ART or REFER
  - Check mother’s health and advise on safe sexual practices and family planning

IF POSSIBLE HIV INFECTION / HIV EXPOSED OR SUSPECTED SYMPTOMATIC OR CONFIRMED HIV INFECTION

IF CHILD CONFIRMED UNINFECTED
- Stop co-trimoxazole only if no longer breastfeeding and more than 12 months of age
- Counsel mother on preventing HIV infection and about her own health

IF HIV TESTING HAS NOT BEEN DONE
- Re-discuss the benefits of HIV testing
- Identify where and when HIV testing including virological testing can be done
- If mother consents arrange HIV testing and follow-up visit

IF MOTHER REFUSES TESTING
- Provide ongoing care for the child, including routine monthly follow-up
- Discuss and provide co-trimoxazole prophylaxis
- On subsequent visits, re-counsel the mother on preventing HIV and on benefits of HIV testing

* Any child with confirmed HIV infection should be enrolled in chronic HIV care, including assessment for eligibility of ART – refer to subsequent sections of the chart booklet.
COUNSEL THE MOTHER

Assess the Feeding of Sick Infants under 2 years (or if child has very low weight for age)

Ask questions about the child’s usual feeding and feeding during this illness. Note whether the mother is HIV infected, uninfected, or does not know her status. Compare the mother’s answers to the Feeding Recommendations for the child’s age.

ASK — How are you feeding your child?

<table>
<thead>
<tr>
<th>If the infant is receiving any breast milk, ASK:</th>
<th>If infant is receiving replacement milk, ASK:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- How many times during the day?</td>
<td>- What replacement milk are you giving?</td>
</tr>
<tr>
<td>- Do you also breastfeed during the night?</td>
<td>- How many times during the day and night?</td>
</tr>
<tr>
<td></td>
<td>- How much is given at each feed?</td>
</tr>
<tr>
<td></td>
<td>- How is the milk prepared?</td>
</tr>
<tr>
<td></td>
<td>- How is the milk being given? Cup or bottle?</td>
</tr>
<tr>
<td></td>
<td>- How are you cleaning the utensils?</td>
</tr>
<tr>
<td></td>
<td>- If still breastfeeding as well as giving replacement milk could the mother give extra breast milk instead of replacement milk (especially if the baby is below 6 months)</td>
</tr>
</tbody>
</table>

Does the infant take any other food or fluids?

- What food or fluids?
- How many times per day?
- What do you use to feed the child?

If low weight for age, ASK:

- How large are servings?
- Does the child receive his own serving?
- Who feeds the child and how?

During this illness, has the infant’s feeding changed?

- If yes, how?
FEEDING RECOMMENDATIONS DURING SICKNESS AND HEALTH

NOTE: These feeding recommendations should be followed for infants of HIV negative mothers. Mothers who DO NOT KNOW their HIV status should be advised to breastfeed but also to be HIV tested so that they can make an informed choice about feeding.

Up to 6 Months of Age

- Breastfeed as often as the child wants, day and night, at least 8 times in 24 hours.
- Do not give other foods or fluids.

6 Months up to 12 Months

- Breastfeed as often as the child wants.
- Give adequate servings of:
  - 3 times per day if breastfed plus snacks
  - 5 times per day if not breastfed.

12 Months up to 2 Years

- Breastfeed as often as the child wants.
- Give adequate servings of:
  - or family foods 3 or 4 times per day plus snacks.

2 Years and Older

- Give family foods at 3 meals each day. Also, twice daily, give nutritious food between meals, such as:

Feeding Recommendations for a child who has PERSISTENT DIARRHOEA

- If still breastfeeding, give more frequent, longer breastfeeds, day and night.
- If taking other milk:
  - replace with increased breastfeeding OR
  - replace with fermented milk products, such as yoghurt OR
  - replace half the milk with nutrient-rich semisolid food.
Feeding advice for the mother of a child with CONFIRMED HIV INFECTION

The child with confirmed HIV infection needs the benefits of breastfeeding and should be encouraged to breastfeed. S/he is already HIV infected therefore there is no reason for stopping breastfeeding or using replacement feeding.

The child should be fed according to the feeding recommendations for his age.

Children with confirmed HIV infection often suffer from poor appetite and mouth sores, give appropriate advice.

If the child is being fed with a bottle encourage the mother to use a clean cup as this is more hygienic and will reduce episodes of diarrhoea.

Inform the mother about the importance of hygiene when preparing food because her child can easily get sick. She should wash her hands after going to the toilet and before preparing food. If the child is not gaining weight well, the child can be given an extra meal each day and the mother can encourage him to eat more food.

Counsel the mother about Stopping Breastfeeding (for HIV exposed)

While you are breastfeeding teach your infant to drink expressed breast milk from a cup. This milk may be heat-treated to destroy HIV.

Once the infant is drinking comfortably, replace one breastfeed with one cup feed using expressed breast milk.

Increase the number of cup-feeds every few days and reduce the number of breastfeeds. Ask an adult family member to help with cup feeding.

Stop putting your infant to your breast completely as soon as your baby is accustomed to frequent cup feeding. From this point on it is best to heat-treat your breast milk.

If your infant is receiving milk only check that your baby has at least 6 wet nappies in a 24 hour period. This means he is getting enough milk.

Gradually replace the expressed breast milk with commercial infant formula or another milk after 6 months.

If your infant needs to suck, give him/her one of your clean fingers instead of the breast.

To avoid breast engorgement (swelling) express a little milk whenever your breasts feel full. This will help you feel more comfortable. Use cold compresses to reduce inflammation. Wear a firm bra to prevent discomfort.

Do not begin breastfeeding again once you have stopped. If you do you can increase the chances of passing HIV to your infant. If your breasts become engorged express breast milk by hand.

Begin using a family planning method of your choice, if you have not already done so, as soon as you start reducing breastfeeds.

“AFASS” CRITERIA FOR STOPPING BREASTFEEDING for HIV exposed

Acceptable:
Mother perceives no problem in replacement feeding.

Feasible:
Mother has adequate time, knowledge, skills, resources, and support to correctly mix formula or milk and feed the infant up to 12 times in 24 hours.

Affordable:
Mother and family, with community can pay the cost of replacement feeding without harming the health and nutrition of the family.

Sustainable:
Availability of a continuous supply of all ingredients needed for safe replacement feeding for up to one year of age or longer.

Safe:
Replacement foods are correctly and hygienically prepared and stored.
If the child is not being fed as described in the above recommendations, counsel the mother accordingly. In addition:

- **If the mother reports difficulty with breastfeeding, assess breastfeeding (see YOUNG INFANT chart).**
  - As needed, show the mother correct positioning and attachment for breastfeeding.

- **If the child is less than 6 months old and is taking other milk or foods*:**
  - Build the mother's confidence that she can produce all the breast milk that the child needs.
  - Suggest giving more frequent, longer breastfeeds day or night, and gradually reducing other milk or foods.

- **If other milk needs to be continued, counsel the mother to:**
  - Breastfeed as much as possible, including at night.
  - Make sure that other milk is a locally appropriate breast milk substitute.
  - Make sure other milk is correctly and hygienically prepared and given in adequate amounts.
  - Finish prepared milk within an hour.

- **If the mother is using a bottle to feed the child:**
  - Recommend substituting a cup for bottle.
  - Show the mother how to feed the child with a cup.

- **If the child is not feeding well during illness, counsel the mother to:**
  - Breastfeed more frequently and for longer if possible.
  - Use soft, varied, appetizing, favourite foods to encourage the child to eat as much as possible, and offer frequent small feeds.
  - Clear a blocked nose if it interferes with feeding. 
  - Expect that appetite will improve as child gets better.

- **If the child has a poor appetite:**
  - Plan small, frequent meals.
  - Give milk rather than other fluids except where there is diarrhoea with some dehydration.
  - Give snacks between meals.
  - Give high energy foods.
  - Check regularly.

- **If the child has sore mouth or ulcers:**
  - Give soft foods that will not burn the mouth, such as eggs, mashed potatoes, pumpkin or avocado.
  - Avoid spicy, salty or acid foods.
  - Chop foods finely.
  - Give cold drinks or ice, if available.

*If child is HIV exposed, counsel the mother about the importance of not mixing breastfeeding with replacement feeding.*
Breastfeed exclusively as often as the child wants, day and night.
Feed at least 8 times in 24 hours.
Do not give other foods or fluids (mixed feeding increases the risk of HIV transmission from mother to child when compared with exclusive breastfeeding).
Stop breastfeeding as soon as this is AFASS.

OR (if feasible and safe)

Formula feed exclusively (no breast milk at all)
Give formula. Other foods or fluids are not necessary.
Prepare correct strength and amount just before use. Use milk within two hours and discard any left over (a fridge can store formula for 24 hours)
Cup feeding is safer than bottle feeding
Clean the cup and utensils with hot soapy water
Give these amounts of formula 6 to 8 times per day

* Exception: heat-treated breast milk can be given

<table>
<thead>
<tr>
<th>Age months</th>
<th>Amount and times per day</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 up to 1</td>
<td>60 ml x 8</td>
</tr>
<tr>
<td>1 up to 2</td>
<td>90 ml x 7</td>
</tr>
<tr>
<td>2 up to 3</td>
<td>120 ml x 6</td>
</tr>
<tr>
<td>3 up to 4</td>
<td>120 ml x 6</td>
</tr>
<tr>
<td>4 up to 5</td>
<td>150 ml x 6</td>
</tr>
<tr>
<td>5 up to 6</td>
<td>150 ml x 6</td>
</tr>
</tbody>
</table>

If still breast feeding, breastfeed as often as the child wants
Give 3 adequate servings of nutritious complementary foods plus one snack per day (to include protein, mashed fruit and vegetables).
Each meal should be 3/4 cup*. If possible, give an additional animal-source food, such as liver or meat

If an infant is not breastfeeding, give about 1-2 cups (500 ml) of full cream milk or infant formula per day
Give milk with a cup, not a bottle
If no milk is available, give 4-5 feeds per day

* one cup = 250 ml

If still breastfeeding, breastfeed as often as the child wants.
Give adequate servings of:

or family foods 5 times per day.
If breastfed, give adequate servings 3 times per day plus snacks
If an infant is not breastfeeding, give about 1-2 cups* (500 ml) of full cream milk or infant formula per day
Give milk with a cup, not a bottle
If no milk is available, give 4-5 feeds per day

* one cup = 250 ml

Help mother prepare for stopping breastfeeding:

Mother should discuss and plan in advance stopping breastfeeding with her family if possible
Express milk and give by cup
Find a regular supply of formula or other milk, e.g. full cream cows milk
Learn how to prepare and store milk safely at home

Help mother make the transition:

Teach mother to cup feed her baby
Clean all utensils with soap and water
Start giving only formula or cows milk once the baby takes all feeds by cup

Stop breastfeeding completely:
Express and discard enough breast milk to keep comfortable until lactation stops
COUNSEL THE MOTHER ABOUT HER OWN HEALTH

- If the mother is sick, provide care for her, or refer her for help.
- If she has a breast problem (such as engorgement, sore nipples, breast infection), provide care for her or refer her for help.
- Advise her to eat well to keep up her own strength and health.
- Check the mother’s immunization status and give her tetanus toxoid if needed.
- Make sure she has access to:
  - Family planning
  - Counselling on STD and AIDS prevention.
- Encourage every mother to be sure to know her own HIV status and to seek HIV testing if she does not know her status or is concerned about the possibility of HIV in herself or her family.
Advise the Mother to Increase Fluid During Illness

**FOR ANY SICK CHILD:**
- If child is breastfed, breastfeed more frequently and for longer at each feed. If child is taking breast-milk substitutes, increase the amount of milk given
- Increase other fluids. For example, give soup, rice water, yoghurt drinks or clean water.

**FOR CHILD WITH DIARRHOEA:**
- Giving extra fluid can be lifesaving. Give fluid according to Plan A or Plan B on the TREAT THE CHILD chart

### WHEN TO RETURN

#### Advise the Mother When to Return to Health Worker FOLLOW-UP VISIT

<table>
<thead>
<tr>
<th>If the child has:</th>
<th>Return for first follow-up in:</th>
</tr>
</thead>
<tbody>
<tr>
<td>PNEUMONIA</td>
<td>2 days</td>
</tr>
<tr>
<td>DYSENTERY</td>
<td></td>
</tr>
<tr>
<td>MALARIA, if fever persists</td>
<td></td>

<tr>
<td>SUSPECTED SYMPTOMATIC HIV INFECTION</td>
<td></td>
</tr>
<tr>
<td>HIV EXPOSED/ POSSIBLE HIV</td>
<td></td>
</tr>
<tr>
<td>VERY LOW WEIGHT FOR AGE</td>
<td>30 days</td>
</tr>
</tbody>
</table>

Advise the mother to come for follow-up at the earliest time listed for the child’s problems.

#### WHEN TO RETURN IMMEDIATELY

Advise mother to return immediately if the child has any of these signs:

- Any sick child
  - Not able to drink or breastfeed
  - Becomes sicker
  - Develops a fever
- If child has NO PNEUMONIA: COUGH OR COLD, also return if:
  - Fast breathing
  - Difficult breathing
- If child has Diarrhoea, also return if:
  - Blood in stool
  - Drinking poorly
ASSESS, CLASSIFY AND TREAT THE SICK YOUNG INFANT AGED UP TO 2 MONTHS

CHECK FOR VERY SEVERE DISEASE AND LOCAL INFECTION

ASK:  
1. Is the infant having difficulty in feeding?  
2. Has the infant had convulsions (fits)?

LOOK AND FEEL:  
1. Count the breaths in one minute. Repeat the count if 60 or more breaths per minute.  
2. Look for severe chest indrawing.  
3. Measure axillary temperature.  
4. Look at the umbilicus. Is it red or draining pus?  
5. Look for skin pustules.  
6. Look at the young infant’s movements. If infant is sleeping, ask the mother to wake him/her.  
   - Does the infant move on his/her own?  
   - If the infant is not moving, gently stimulate him/her.
   - Does the infant move only when stimulated but then stops?  
   - Does the infant not move at all?

Classify ALL YOUNG INFANTS

SIGNs

1. Any one of the following signs
   - Not feeding well or
   - Convulsions or
   - Fast breathing (60 breaths per minute or more) or
   - Severe chest indrawing or
   - Fever (37.5°C or above) or
   - Low body temperature (less than 35.5°C) or
   - Movement only when stimulated or no movement at all

CLASSIFY AS

1. VERY SEVERE DISEASE
   - Give first dose of intramuscular antibiotics.
   - Treat to prevent low blood sugar.
   - Refer URGENTLY to hospital.**
   - Advise mother how to keep the infant warm on the way to the hospital.

2. LOCAL BACTERIAL INFECTION
   - Give appropriate oral antibiotic.
   - Teach mother to treat local infections at home.
   - Advise mother to give home care for the young infant.
   - Follow up in 2 days.

3. SEVERE DISEASE OR LOCAL INFECTION UNLIKELY
   - Advise mother to give home care for the young infant.

TREATMENT

(Urgent pre-referral treatments are in bold print)

---

* These thresholds are based on axillary temperature. The thresholds for rectal temperature readings are approximately 0.5°C higher.
** If referral is not possible, see Integrated Management of Childhood Illness, Management of the sick young infant module, Annex 2 “Where referral is not possible”
**THEN CHECK FOR JAUNDICE**

<table>
<thead>
<tr>
<th><strong>ASK:</strong></th>
<th><strong>LOOK AND FEEL:</strong></th>
</tr>
</thead>
</table>
| ✏️ When did jaundice first appear? | ✏️ Look for jaundice (yellow eyes or skin).  
✏️ Look at the young infant’s palms and soles. Are they yellow? |

**Classify Jaundice**

<table>
<thead>
<tr>
<th><strong>SIGNS</strong></th>
<th><strong>CLASSIFY AS</strong></th>
<th><strong>TREATMENT</strong></th>
</tr>
</thead>
</table>
| ⬜ Any jaundice if age less than 24 hours or | **SEVERE JAUNDICE** | ✍️ Treat to prevent low blood sugar.  
✍️ Refer URGENTLY to hospital.  
✍️ Advise mother how to keep the infant warm on the way to the hospital. |
| ⬜ Yellow palms and soles at any age | | |
| ⬜ Jaundice appearing after 24 hours of age and | **JAUNDICE** | ✍️ Advise the mother to give home care for the young infant  
✍️ Advise mother to return immediately if palms and soles appear yellow.  
✍️ If the young infant is older than 3 weeks, refer to a hospital for assessment.  
✍️ Follow-up in 1 day. |
| ⬜ Palms and soles not yellow | | |
| ⬜ No jaundice | **NO JAUNDICE** | ✍️ Advise the mother to give home care for the young infant. |
**THEN ASK: Does the young infant have diarrhoea***?

**IF YES, LOOK AND FEEL:**

- **Look at the young infant’s general condition:**
  - Infant’s movements
    - Does the infant move on his/her own?
    - Does the infant move only when stimulated but then stops?
    - Does the infant not move at all?
  - Is the infant restless and irritable?
- **Look for sunken eyes.**
- **Pinch the skin of the abdomen.**
  - Does it go back:
    - Very slowly (longer than 2 seconds)?
    - Or slowly?

**Classify DIARRHOEA FOR DEHYDRATION**

</thead>
<tbody>
<tr>
<td>If an infant has no indications to refer urgently to hospital</td>
<td><strong>Classify FEEDING</strong></td>
<td>(Urgent pre-referral treatments are in bold print)</td>
</tr>
<tr>
<td><strong>ASK:</strong></td>
<td><strong>LOOK AND FEEL:</strong></td>
<td><strong>FEEDING PROBLEM OR LOW WEIGHT FOR AGE</strong></td>
</tr>
<tr>
<td>1. Is the infant breastfed? If yes, how many times in 24 hours?</td>
<td>1. Determine weight for age.</td>
<td>1. Not well attached to breast or</td>
</tr>
<tr>
<td>2. Does the infant usually receive any other foods or drinks? If yes, how often?</td>
<td>2. Look for ulcers or white patches in the mouth (thrush).</td>
<td>2. Not suckling effectively, or</td>
</tr>
<tr>
<td>3. If yes, what do you use to feed the infant?</td>
<td><strong>FEEDING PROBLEM OR LOW WEIGHT FOR AGE</strong></td>
<td>3. Less than 8 breastfeeds in 24 hours, or</td>
</tr>
<tr>
<td><strong>ASSESS BREASTFEEDING:</strong></td>
<td></td>
<td>4. Receives other foods or drinks, or</td>
</tr>
<tr>
<td>1. Has the infant breastfed in the previous hour?</td>
<td><strong>LOW WEIGHT FOR AGE</strong></td>
<td>5. Low weight for age, or</td>
</tr>
<tr>
<td>If the infant has not fed in the previous hour, ask the mother to put her infant to the breast. Observe the breastfeed for 4 minutes.</td>
<td><strong>NO FEEDING PROBLEM</strong></td>
<td>6. Thrush (ulcers or white patches in mouth)</td>
</tr>
<tr>
<td>If the infant was fed during the last hour, ask the mother if she can wait and tell you when the infant is willing to feed again.)</td>
<td></td>
<td>7. Not low weight for age and no other signs of inadequate feeding.</td>
</tr>
<tr>
<td>1. Is the infant well attached?</td>
<td><strong>NO FEEDING PROBLEM</strong></td>
<td><strong>NO FEEDING PROBLEM</strong></td>
</tr>
<tr>
<td>not well attached</td>
<td>1. Advise mother to give home care for the young infant.</td>
<td>1. Advise mother to give home care for the young infant.</td>
</tr>
<tr>
<td>good attachment</td>
<td>2. Praise the mother for feeding the infant well.</td>
<td>2. Praise the mother for feeding the infant well.</td>
</tr>
</tbody>
</table>

TO CHECK ATTACHMENT, LOOK FOR:
- More areola seen above infant’s top lip than below bottom lip
- Mouth wide open
- Lower lip turned outwards
- Chin touching breast

(All of these signs should be present if the attachment is good).

1. Is the infant suckling effectively (that is, slow deep sucks, sometimes pausing)?
not suckling effectively | suckling effectively
Clear a blocked nose if it interferes with breastfeeding.
THEN CHECK FOR FEEDING PROBLEM OR LOW WEIGHT FOR AGE IN INFANTS RECEIVING NO BREAST MILK

(USE this chart when an HIV positive mother has chosen not to breastfeed)

<table>
<thead>
<tr>
<th>ASK:</th>
<th>LOOK, LISTEN, FEEL:</th>

FEEDING PROBLEM OR LOW WEIGHT FOR AGE

NO FEEDING PROBLEM

¾ Counsel about feeding
¾ Explain the guidelines for safe replacement feeding
¾ Identify concerns of mother and family about feeding.
¾ If mother is using a bottle, teach cup feeding
¾ If thrush, teach the mother to treat it at home
¾ Follow-up FEEDING PROBLEM or THRUSH in 2 days
¾ Follow up LOW WEIGHT FOR AGE in 7 days

¾ Advise mother to continue feeding, and ensure good hygiene
¾ Praise the mother for feeding the infant

Classify FEEDING
THEN CHECK THE YOUNG INFANT’S IMMUNIZATION AND VITAMIN A STATUS:

<table>
<thead>
<tr>
<th>AGE</th>
<th>VACCINE</th>
<th>VITAMIN A</th>
</tr>
</thead>
<tbody>
<tr>
<td>Birth</td>
<td>BCG</td>
<td>200,000 IU to the mother within 6 weeks of delivery</td>

<tr>
<td>4-&lt;4.5 kg</td>
<td>2.1 ml*</td>
</tr>
</tbody>
</table>

*Avoid using undiluted 40 mg/ml gentamicin.

Referral is the best option for a young infant classified as VERY SEVERE DISEASE. If referral is not possible, continue to give ampicillin and gentamicin for at least 5 days. Give ampicillin two times daily to infants less than one week of age and 3 times daily to infants one week or older. Give gentamicin once daily.

Treat the Young Infant to Prevent Low Blood Sugar

If the young infant is able to breastfeed:
Ask the mother to breastfeed the young infant.

If the young infant is not able to breastfeed but is able to swallow:
Give 20-50 ml (10 ml/kg) expressed breastmilk before departure. If not possible to give expressed breastmilk, give 20-50 ml (10 ml/kg) sugar water (To make sugar water: Dissolve 4 level teaspoons of sugar (20 grams) in a 200-ml cup of clean water).

If the young infant is not able to swallow:
Give 20-50 ml (10 ml/kg) of expressed breastmilk or sugar water by nasogastric tube.
TREAT THE YOUNG INFANT

Teach the Mother How to Keep the Young Infant Warm on the Way to the Hospital

- Provide skin to skin contact, OR
- Keep the young infant clothed or covered as much as possible all the time. Dress the young infant with extra clothing including hat, gloves, socks and wrap the infant in a soft dry cloth and cover with a blanket.

Give an Appropriate Oral Antibiotic for local infection

For local bacterial infection:

First-line antibiotic: ___________________________
Second-line antibiotic: ___________________________

<table>
<thead>
<tr>
<th>AGE or WEIGHT</th>
<th>COTRIMOXAZOLE</th>
<th>AMOXICILLIN</th>

<td>1/2*</td>
<td>1.25 ml*</td>
</tr>
<tr>
<td>1 month up to 2 months (4-6 kg)</td>
<td>1/4</td>
<td>1</td>
</tr>
</tbody>
</table>

* Avoid cotrimoxazole in infants less than 1 month of age who are premature or jaundiced.
TREAT THE YOUNG INFANT AND COUNSEL THE MOTHER

Teach the Mother How to Treat Local Infections at Home

- Explain how the treatment is given.
- Watch her as she does the first treatment in the clinic.
- Tell her to return to the clinic if the infection worsens.

To Treat Skin Pustules or Umbilical Infection

The mother should do the treatment twice daily for 5 days:

- Wash hands
- Gently wash off pus and crusts with soap and water
- Dry the area
- Paint the skin or umbilicus/cord with full strength gentian violet (0.5%)
- Wash hands again

To Treat Thrush (ulcers or white patches in mouth)

The mother should do the treatment 4 times daily for 7 days:

- Wash hands
- Paint the mouth with half-strength gentian violet (0.25%) using a clean soft cloth wrapped around the finger
- Wash hands again

To Treat Diarrhoea, See TREAT THE CHILD CHART.

Immunize Every Sick Young Infant, as needed.
COUNSEL THE MOTHER

**Ü Teach Correct Positioning and Attachment for Breastfeeding**

- Show the mother how to hold her infant
  - with the infant's head and body in line
  - with the infant approaching breast with nose opposite to the nipple
  - with the infant held close to the mother's body
  - with the infant's whole body supported, not just neck and shoulders.

- Show her how to help the infant to attach. She should:
  - touch her infant's lips with her nipple
  - wait until her infant's mouth is opening wide
  - move her infant quickly onto her breast, aiming the infant's lower lip well below the nipple.

- Look for signs of good attachment and effective suckling. If the attachment or suckling is not good, try again.

**Ü Teach the Mother How to Express Breast Milk**

Ask the mother to:

- Wash her hands thoroughly.
- Make herself comfortable.
- Hold a wide necked container under her nipple and areola.
- Place her thumb on top of the breast and the first finger on the under side of the breast so they are opposite each other (at least 4 cm from the tip of the nipple).
- Compress and release the breast tissue between her finger and thumb a few times.
- If the milk does not appear she should re-position her thumb and finger closer to the nipple and compress and release the breast as before.
- Compress and release all the way around the breast, keeping her fingers the same distance from the nipple. Be careful not to squeeze the nipple or to rub the skin or move her thumb or finger on the skin.
- Express one breast until the milk just drips, then express the other breast until the milk just drips.
- Alternate between breasts 5 or 6 times, for at least 20 to 30 minutes.
- Stop expressing when the milk no longer flows but drips from the start.
COUNSEL THE MOTHER

Counsel the HIV-positive mother who has chosen not to breastfeed (or the caretaker of a child who cannot be breastfed)

The mother or caretaker should have received full counselling before making this decision

- Ensure that the mother or caretaker has an adequate supply of appropriate breast milk substitute replacement feed.
- Ensure that the mother or caretaker knows how to prepare milk correctly and hygienically and has the facilities and resources to do so.
- Demonstrate how to feed with a cup and spoon rather than a bottle.
- Make sure that the mother or caretaker understands that prepared feed must be finished within an hour after preparation.
- Make sure that the mother or caretaker understands that mixing breastfeeding with replacement feeding may increase the risk of HIV infection and should not be done.

Teach the Mother How to Feed by a Cup

- Put a cloth on the infant's front to protect his clothes as some milk can spill
- Hold the infant semi-upright on the lap.
- Put a measured amount of milk in the cup.
- Hold the cup so that it rests lightly on the infant's lower lip.
- Tip the cup so that the milk just reaches the infant's lips.
- Allow the infant to take the milk himself. DO NOT pour the milk into the infant's mouth.

HOW TO PREPARE COMMERCIAL FORMULA MILK

- Wash your hands before preparing the formula.
- Make ____ ml for each feed. Feed the baby ____ times every 24 hours.
- Always use the marked cup or glass to measure water and the scoop to measure the formula powder. Your baby needs ______ scoops.
- Measure the exact amount of powder that you will need for one feed.
- Boil enough water vigorously for 1 or 2 seconds.
- Add the hot water to the powdered formula. The water should be added while it is still hot and not after it has cooled down. Stir well.
- Only make enough formula for one feed at a time. Do not keep milk in a thermos pask because it will become contaminated quickly.
- Feed the baby using a cup. Discard any unused formula, give it to an older child or drink it yourself.
- Wash the utensils.
- Come back to see me on _____.

Come back to see me on _____.
Teach the Mother How to Keep the Low Weight Infant Warm at Home

- Keep the young infant in the same bed with the mother.
- Keep the room warm (at least 25°C) with home heating device and make sure that there is no draught of cold air.
- Avoid bathing the low weight infant. When washing or bathing, do it in a very warm room with warm water, dry immediately and thoroughly after bathing and clothe the young infant immediately.
- Change clothes (e.g. nappies) whenever they are wet.
- Provide skin to skin contact as much as possible, day and night. For skin to skin contact:
  - Dress the infant in a warm shirt open at the front, a nappy, hat and socks.
  - Place the infant in skin to skin contact on the mother’s chest between the mother’s breasts. Keep the infant’s head turned to one side
  - Cover the infant with mother’s clothes (and an additional warm blanket in cold weather)
- When not in skin to skin contact, keep the young infant clothed or covered as much as possible at all times. Dress the young infant with extra clothing including hat and socks, loosely wrap the young infant in a soft dry cloth and cover with a blanket.
- Check frequently if the hands and feet are warm. If cold, re-warm the baby using skin to skin contact.
- Breastfeed (or give expressed breast milk by cup) the infant frequently
COUNSEL THE MOTHER

Advise the Mother to Give Home Care for the Young Infant

1. EXCLUSIVELY BREASTFEED THE YOUNG INFANT
   Give only breastfeeds to the young infant
   Breastfeed frequently, as often and for as long as the infant wants,

2. MAKE SURE THAT THE YOUNG INFANT IS KEPT WARM AT ALL TIMES.
   In cool weather cover the infant’s head and feet and dress the infant with extra clothing.

3. WHEN TO RETURN:

   | Follow up visit | When to return if the young infant has any of these signs: |
   | If the infant has: | Return for first follow-up in: | ù | Breastfeeding poorly |
   | ñ JAUNDICE | 1 day |
   | ñ LOCAL BACTERIAL INFECTION |
   | ñ FEEDING PROBLEM |
   | ñ THRUSH |
   | ñ DIARRHOEA |
   | ñ LOW WEIGHT FOR AGE | 14 days |
   | ñ CONFIRMED HIV INFECTION or POSSIBLE HIV INFECTION/ HIV EXPOSED | 14 days |

   Make sure that the young infant is kept warm at all times.

   WHEN TO RETURN IMMEDIATELY:

   x JAUNDICE
   x LOCAL BACTERIAL INFECTION
   x FEEDING PROBLEM
   x THRUSH
   x DIARRHOEA
   x LOW WEIGHT FOR AGE
   x CONFIRMED HIV INFECTION or POSSIBLE HIV INFECTION/ HIV EXPOSED
GIVE FOLLOW-UP CARE FOR THE YOUNG INFANT

ASSESS EVERY YOUNG INFANT FOR “VERY SEVERE DISEASE” DURING FOLLOW UP VISIT.

LOCAL BACTERIAL INFECTION

After 2 days:
Look at the umbilicus. Is it red or draining pus?
Look for skin pustules.

Treatment:
- If umbilical pus or redness remains same or is worse, refer to hospital. If pus and redness are improved, tell the mother to continue giving the 5 days of antibiotic and continue treating the local infection at home.
- If skin pustules are same or worse, refer to hospital. If improved, tell the mother to continue giving the 5 days of antibiotic and continue treating the local infection at home.

JAUNDICE

After 1 day:
Look for jaundice. Are palms and soles yellow?

- If palms and soles are yellow, refer to hospital.
- If palms and soles are not yellow, but jaundice has not decreased, advise the mother home care and ask her to return for follow up in 1 day.
- If jaundice has started decreasing, reassure the mother and ask her to continue home care. Ask her to return for follow up at 3 weeks of age. If jaundice continues beyond three weeks of age, refer the young infant to a hospital for further assessment.

DIARRHOEA

After 2 days:
Ask: Has the diarrhoea stopped?

Treatment:
- If the diarrhoea has not stopped, assess and treat the young infant for diarrhoea. >SEE rDoes the Young Infant Have Diarrhoea?
- If the diarrhoea has stopped, tell the mother to continue exclusive breastfeeding.
GIVE FOLLOW-UP CARE FOR THE YOUNG INFANT

POSSIBLE HIV/HIV EXPOSED

- Follow-up after 14 days and then monthly or according to immunization programme.
- Counsel about feeding practices. Avoid giving both breast milk and formula milk (mixed feeding).
- Start co-trimoxazole prophylaxis at 4-6 weeks, if not started already and check compliance.
- Test for HIV infection as early as possible, if not already done so.
- Refer for ART if presumptive severe HIV infection as per definition above.
- Counsel the mother about her HIV status and arrange counselling and testing for her if required.

FEEDING PROBLEM

After 2 days:

Reassess feeding. > See \textgreater \textgreater \textgreater \textgreater Then Check for Feeding Problem or Low Weight above.
Ask about any feeding problems found on the initial visit.

- Counsel the mother about any new or continuing feeding problems. If you counsel the mother to make significant changes in feeding, ask her to bring the young infant back again.

- If the young infant is low weight for age, ask the mother to return 14 days after the initial visit to measure the young infant’s weight gain.

\textbf{Exception:}
If you do not think that feeding will improve, or if the young infant has \textit{lost weight}, refer to HOSPITAL.
GIVE FOLLOW-UP CARE FOR THE YOUNG INFANT

LOW WEIGHT FOR AGE

After 14 days:
Weigh the young infant and determine if the infant is still low weight for age.
Reassess feeding. > See then Check for Feeding Problem or Low Weight above.

- If the infant is no longer low weight for age, praise the mother and encourage her to continue.
- If the infant is still low weight for age, but is feeding well, praise the mother. Ask her to have her infant weighed again within a month or when she returns for immunization.
- If the infant is still low weight for age and still has a feeding problem, counsel the mother about the feeding problem. Ask the mother to return again in 14 days (or when she returns for immunization, if this is within 14 days). Continue to see the young infant every few weeks until the infant is feeding well and gaining weight regularly or is no longer low weight for age.

Exception:
If you do not think that feeding will improve, or if the young infant has lost weight, refer to hospital.

THRUSH

After 2 days:
Look for ulcers or white patches in the mouth (thrush).
Reassess feeding. > See then Check for Feeding Problem or Low Weight above.

- If thrush is worse, or the infant has problems with attachment or suckling, refer to hospital.
- If thrush is the same or better, and if the infant is feeding well, continue half-strength gentian violet for a total of 7 days.
MANAGEMENT OF THE SICK CHILD AGED 2 MONTHS UP TO 5 YEARS

ASSESS

(Circle all signs present)

CHECK FOR GENERAL DANGER SIGNS

General danger signs present?

- Not able to drink or breastfeed
- Vomits everything
- Convulsions
- Lethargic or unconscious
- Convulsing now

Yes___ No___

Remember to use danger sign when selecting classifications

DOES THE CHILD HAVE COUGH OR DIFFICULT BREATHING?

Yes___ No___

For how long? ____ Days

- Count the breaths in one minute. _______ breaths per minute. Fast breathing?
- Look for chest indrawing.
- Look and listen for stridor/wheeze.

DOES THE CHILD HAVE DIARRHOEA?

Yes ___ No __

- For how long? _____ Days

- Is there blood in the stools?

DOES THE CHILD HAVE FEVER?

(by history/feels hot/temperature 37.5°C or above)            Yes___ No___

Decide Malaria Risk: High    Low

- For how long? _____ Days

- If more than 7 days, has fever been present every day?
- Has child had measles within the last three months?

DOES THE CHILD HAVE AN EAR PROBLEM?

Yes___  No___

- Is there ear pain?
- Is there ear discharge?

If Yes, for how long? ___ Days

- Look for pus draining from the ear.
- Feel for tender swelling behind the ear.

THEN CHECK FOR MALNUTRITION AND ANAEMIA

- Look visible severe wasting.
- Look for palmar pallor.

Severe palmar pallor? Some palmar pallor?

- Look for oedema of both feet.

Determine weight for age.

Very Low ___   Not Very Low ___

CHECK FOR HIV INFECTION

HIV tested before (confidential):  Mother

- o  positive   o  negative    o  unknown

Child

- o   positive  o  negative  o unknown

†Pneumonia  †Parotid enlargement
†Very Low weight for age  †Oral thrush
†Generalized persistent lymphadenopathy  †Pneumonia
†Persistent diarrhoea  †Generalized rash and fever
†One of these: cough, runny nose, or red eyes.

If the child has measles now or within the last 3 months:

- Look for mouth ulcers.

If Yes, are they deep and extensive?

- Look for pus draining from the eye.
- Look for clouding of the cornea.

DOES THE CHILD HAVE AN IMMUNIZATION STATUS

Circle immunizations needed today.

## ANNEX A: SKIN AND MOUTH CONDITIONS*

<table>
<thead>
<tr>
<th>Identify skin problem if skin is itching</th>
<th>SIGNS</th>
<th>CLASSIFY AS:</th>
<th>TREATMENT</th>
<th>Unique features in HIV</th>
</tr>
</thead>
</table>
| PAPULAR ITCHING RASH (PRURIGO)           | Itching rash with small papules and scratch marks. Dark spots with pale centres | Treat itching:  
- calamine lotion  
- Antihistamine by mouth  
- If not improved, 1% hydrocortisone  
Can be an early sign of HIV and needs assessment for HIV | **Is a Clinical stage 2 defining disease** |
| RINGWORM (TINEA)                         | An itchy circular lesion with a raised edge and fine scaly area in centre with loss of hair. May also be found on body or web of feet. | Whitfield's ointment or other anti-fungal cream if few patches  
If extensive Refer, if not give: ketoconazole for 2 up to 12 months (6-10 kg) 40 mg per day. For 12 up to 5 years give 60 mg per day. Or give griseofulvin 10 mg/kg/day. If in hairline, shave hair | Extensive: There is a high incidence of coexisting nail infection which has to be treated adequately, to prevent recurrences of tinea infection of skin **Fungal nail infection is a Clinical stage 2 defining disease** |
| SCABIES                                  | Rash and excoriations on torso; burrows in web space and wrist. Face spared. | Treat itching as above  
Manage with anti-scabies:  
25% topical benzyl benzoate at night, repeat for 3 days after washing  
1% topical lindane cream or lotion once; wash off after 12 hours | In HIV positive individuals scabies may manifest as crusted scabies.  
Crusted scabies presents as extensive areas of crusting mainly on the scalp face, back, and feet. Patients may not complain of itch but the scales will be teeming with mites. |

### Classify

- **Molluscum contagiosum**

### Management & treatment

- **Leave them alone unless superinfected**
- **Use of phenol:**
  - Pricking each lesion with a needle or sharpened orange stick and dabbing the lesion with phenol
  - Electrodesiccation
  - Liquid nitrogen application (using orange stick)
  - Curettage

- **Incidence is higher**
- **Giant molluscum (>1cm in size), or coalescent double or triple lesions may be seen**
- **More than 100 lesions may be seen.**
- **Lesions often chronic and difficult to eradicate**

### Unique features in HIV

- **Incidence is higher**
- **Giant molluscum (>1cm in size), or coalescent double or triple lesions may be seen**
- **More than 100 lesions may be seen.**
- **Lesions often chronic and difficult to eradicate**

- **Extensive molluscum contagiosum is a Clinical stage 2 defining disease**

### Greasy scales and redness on central face, body folds

<table>
<thead>
<tr>
<th>Seborrhea</th>

| ![Image](image1.jpg) | Generalized red, widespread with small bumps or blisters; or one or more dark skin areas (fixed drug reactions) | **Fixed drug reactions** | Stop medications  
Give oral antihistamines  
If peeling rash refer | Could be a sign of reaction to ARVs |
| ![Image](image2.jpg) | Wet, oozing sores or excoriated, thick patches | **ECZEMA** | Soak sores with clean water to remove crusts (no soap)  
Dry skin gently  
Short-term use of topical steroid cream not on face. Treat itching | - |
| ![Image](image3.jpg) | Severe reaction due to co-trimoxazole or NVP involving the skin as well as the eyes and mouth. Might cause difficulty breathing | **Steven-Johnson syndrome** | Stop medication  
Refer Urgently | The most lethal reaction to NVP, co-trimoxazole or efafiretz |
## ANNEX B: PAEDIATRIC ART

### RECOMMENDED FIRST LINE ARV REGIMENS FOR CHILDREN

The following regimens are recommended by WHO as first line ART for children. The choice of regimen at the country level will be determined by the National ART guidelines.

<table>
<thead>
<tr>
<th>Regimen 1</th>
<th>Regimen 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>AZT or d4T + 3TC + NVP or EFV&lt;sub&gt;1&lt;/sub&gt;</td>
<td>ABC + 3TC + NVP or EFV&lt;sub&gt;1&lt;/sub&gt;</td>
</tr>
<tr>
<td>AZT + 3TC + NVP</td>
<td>ABC + 3TC + NVP</td>
</tr>
<tr>
<td>AZT + 3TC + EFV</td>
<td>ABC + 3TC + EFV</td>
</tr>
<tr>
<td>d4T + 3TC + NVP</td>
<td>d4T + 3TC + EFV</td>
</tr>
</tbody>
</table>

<sup>1</sup> If <3 years or <10 kg, use NVP. EFV cannot be used in these children.

### Recommendations - When to Start ART

<table>
<thead>
<tr>
<th>POPULATION</th>
<th>&lt; 12 mo Confirmed HIV</th>
<th>≤ 12 mo Presumptive *</th>
<th>1- 4 yrs</th>
<th>&gt; 5 yrs</th>
</tr>
</thead>
<tbody>
<tr>

<td></td>
</tr>
</tbody>
</table>

### Recommendations on What to start ART

<table>
<thead>
<tr>
<th>POPULATION</th>
<th>Up to 12 months</th>
<th>1- 4 yrs</th>
<th>≥ 5</th>
</tr>
</thead>
<tbody>
<tr>
<td>START ART</td>
<td>MTCT/NVP exposure : PI-regimen *</td>
<td>NVP/EFV+ 2NRTI</td>
<td>NVP/EFV+ 2NRTI</td>
</tr>
<tr>
<td>Strength of recommendation</td>
<td>Strong</td>
<td>Strong</td>
<td>Strong</td>
</tr>
</tbody>
</table>

* *3NRTI + NVP, other approaches need data before can be recommended, what to do where NO PI or no cold chain, i.e., no choice, use standard NVP

Need for research on new strategies for ART in MTCT exposed infants

Risks of NVP resistance from any NVP containing ART or MTCT regimens, esp. in BF mothers

---

*If lack ability for viral test, use WHO presumptive diagnosis of HIV ñ with clinical sx or low CD4 ñ allows initiation ART based on presumptive dx and stop if found uninfected.

TEXT ONLY - Well infant diagnose late may defer initiation base don CD4/VL
**ANNEX B: ARV DOSAGES**

- Give for children 6 weeks of age and above
- 0.75 Twice daily means 1 tablet AM and 0.5 (half) tablet PM
- 1.5 twice daily means 2 tablets AM and 1 tablet PM

### Lamivudine (3TC) - Give 4 mg/kg per dose twice daily

<table>
<thead>
<tr>
<th>Weight</th>
<th>Syrup 10 mg/ml</th>

</tbody>
</table>
Integrated Management of Childhood Illness Chart booklet for high HIV settings

Process of updating the IMCI chart booklet for high HIV settings

The generic IMCI chart booklet was developed and published in 1995 based on evidence existing at that time (Reference: Integrated management of Childhood Illness Adaptation Guide: C. Technical basis for adapting clinical guidelines, 1998). New evidence on the management of acute respiratory infections, diarrhoeal diseases, malaria, ear infections and infant feeding, published between 1995 and 2004, was summarized in the document "Technical updates of the guidelines on IMCI : evidence and recommendations for further adaptations, 2005".

Evidence reviews supported the formulation of recommendations in each of these areas (see document and the references). Reviews were usually followed by technical consultations where the recommendations and their bases were discussed and consensus reached. Similarly, a review and several expert meetings were held to update the young infant section of IMCI to include "care of the newborn in the first week of life". More recently, findings of a multi-centre study (Lancet, 2008) led to the development of simplified recommendations for the assessment of severe infections in the newborn.

The chart booklet for high HIV settings is different because it includes sections on paediatric HIV care. The changes made in this edition are based on the new recommendations for paediatric ART following a technical consultation " Report of the WHO Technical Reference Group, Paediatric HIV/ART Care Guideline Group Meeting WHO Headquarters, Geneva, Switzerland,10-11 April 2008; as well as several meetings of the WHO paediatric ART Working Group.

Who was involved and their declaration of interests

The following experts were involved in the development of the updated newborn recommendations: Z. Bhutta, A. Blaise, W. Carlo, R. Cerezo, M.Omar, P. Mazmanny, MK Bhan, H.Taylor, G.Darmstadt, V. Paul, A. Rimoin, L.Wright and WHO staff from Regional and Headquarter offices. Dr. Gul Rehman and a team of CAH staff members drafted the updated chart booklet based on the above. Dr Antonio Pio did the technical editing of the draft IMCI chart booklet, in addition to participating in its peer-review. Other persons who reviewed the draft chart booklet and provided comments include A. Deorari, T. Desta,, A.Kassie, D.P. Hoa, H.Kumar, V. Paul and S. Ramzi.. Their contributions are acknowledged.

None of the above experts declared any conflict of interest.

The Department plans to review the need for an update of this chart booklet by 2011.
