South Sudan

Integrated Disease Surveillance and Response (IDSR)

Annexes W51 2018 (Dec 17 – Dec 23)
The total consultation in the country since week 1 of 2018 is 7,209,554 by hub, Kwajok registered the highest number of consultations as indicated in the table above. The total number of consultations by county is shown in the map above. See the key for more information.
Proportional mortality

Figure 1, above shows the proportional mortality for 2018, with malaria being the main cause of mortality accounting for 47.3% of the deaths since week 1 of 2018, followed by ARI AWD and bloody diarrhoea.

Proportional morbidity

Figure 2, indicates the top causes of morbidity in the country, with malaria being the leading cause of morbidity 2,632,816 (63.8%) followed by ARI, AWD and ABD respectively since week 1 of 2018. refer to the figure above for more information.
In the relatively stable states, malaria is the top cause of morbidity accounting for 29.3% of the consultations in week 51 (representing a decline from 36.8% in week 50).
Among the IDPs, malarial and ARI accounted for 36% and 20% of the consultations in week 51. The other significant causes of morbidity in the IDPs includes AWD, Skin diseases, and Measles.

The top causes of morbidity in the IDPs in 2018 include, ARI, Malaria, AWD, Skin diseases, and injuries.
Malaria is the top cause of morbidity in the country, with a total of 2,632,816 cases and 636 deaths registered since week 1 of 2018. The malaria trend for week 51 of 2018 is below 2014, 2015, 2016, and 2017 as shown in the figure 4a above.

Since the beginning of the year, a total of 157 malaria alerts have been triggered, 112 of those were verified. The Maps above indicate the location reporting malaria alerts from 2014, 2015, 2016, 2017, and 2018.
Acute Watery Diarrhoea | Trends over time

AWD is one of the top causes of morbidity in the country with 482,450 cases reported since week 1 of 2018 including 50 deaths. AWD trend for week 51 of 2018 is below 2014, 2015, 2016 and 2017, as shown in figure 5a, above.

The number of AWD alerts triggered since week 1 of 2018 is 150, out of which 103 were verified. Maps above highlight the areas reporting AWD alerts from 2014 to 2018.
Since week 1 of 2018, a total of 65,582 cases of ABD have been reported country wide including 30 death. ABD trend for 2018 is below 2014, 2015, 2016, and 2017 respectively. Refer to figure 6a, above.

Total of 191 alerts were generated since week 1 of 2018, of which 140 were verified by the county surveillance team. Maps indicating areas triggering alerts since 2014 to 2018 are shown above.
Since the beginning of 2018, at least 484 suspect measles cases including 3 death (CFR 0.74%) have been reported. Of these, 415 suspect cases have undergone measles case-based laboratory-backed investigation with 309 samples collected out of which 48 measles IgM positive cases; 78 clinically confirmed cases; and 56 cases confirmed by epidemiological linkage.

Since week 1 of 2018, 160 alerts of measles were triggered and 127 of those have been verified at county level. Maps of areas raising alerts from 2014 to 2018 are shown above.
Among the IDPs, mortality data was received from Bentiu POC & Juba 3 in week 50. (Table 6). **A total of 15** deaths were reported during the week; in Juba 3 (2), Bentiu POC (13) in the week. During the week, 9 (60%) of the deaths were recorded among children ≥5yrs in (Table 6).

The causes of death during week50 are shown in Table 6.
Mortality in the IDPs - Crude and Under five mortality rates

The U5MR in all the IDP sites that submitted mortality data in week 50 of 2018 is below the emergency threshold of 2 deaths per 10,000 per day (Fig. 20).

The Crude Mortality Rates [CMR] in all the IDP sites that submitted mortality data in week 50 of 2018 were below the emergency threshold of 1 death per 10,000 per day (Fig. 21).

Mortality in the IDPs - Overall mortality in 2018

Notes

WHO and the Ministry of Health gratefully acknowledge health cluster and health pooled fund (HPF) partners who have reported the data used in this bulletin. We would also like to thank ECHO and USAID for providing financial support.

The data has been collected with support from the EWARS project. This is an initiative to strengthen early warning, alert and response in emergencies. It includes an online, desktop and mobile application that can be rapidly configured and deployed in the field. It is designed with frontline users in mind, and built to work in difficult and remote operating environments. This bulletin has been automatically published from the EWARS application.
