Unmet need (%) mCPR (%)	Demand satisfied (%)	Unmet need (%) CPR (%) Demand satisfied (%)									
mCPR by place of reside	Facilities stocked out by method (2018)			Facilities stocked out by method (2018)							
Urban	Rural	(2016)				(2010)					
18%	8%	Long-acting	Implant	7%		Long-acting	Sterilization	<b>†</b>	11%		
Availability of service delivery points (SDP) (2018)		and permanent	IUD	6%		and permanent methods	Sterilization.	ń	14%		
		Short-term	Emergency		26%						
Primary SDPs with at least 3		methods	Emorgonoy	_		Short-term	Condoms	*	8%		
modern methods	92%	metrious	Injectable	4%		methods	Condoms	Ŧ	0 70		
Secondary/tertiary SDPs with at least 5 modern methods			Pill	6%			Condoms.	ń	6%		

## **Definition of Indicators**

- 1. mCPR: % of women of reproductive age who are using (or whose partner is using) a modern contraceptive method at a particular point in 2. unmet need: % of fecund women of reproductive age who want no more children or to postpone having the next child, but are not using a
- contraceptive method, plus women who are currently using a traditional method of family planning.

  3. demand satisfied: percentage of women (or their partners) who desire either to have no additional children or to postpone the next child and
- who are currently using a modern contraceptive method.

  4. Unintended pregnancies: Nb of pregnancies that occurred at a time when women (and their partners) either did not want additional children
- or wanted to delay the next birth.
- 5. unsafe abortion: Nb of unsafe abortions that did not occur during a specified reference period as a result of the protection provided by modern contraceptive use during the reference period.
- 6.Facilities stocked out: % of facilities stocked out of each type of contraceptive offered, on the day of assessment.

  7. Method availability: % of primary (resp. seconday/tertiary) service delivery points with at least 3 (resp. 5) modern methods of contraception
- 8. Total fertility rate: Average nb of children a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality.
- 9. Adolescent birth rate (ABR): Nb of births to adolescent females, aged 15-19 occurring during a given reference period per 1,000 adolescent females.
- Maternal mortality ratio (MMR): Annual nb of female deaths from any cause related to or aggravated by pregnancy or its management per 100 000 live births.
- 11. Infant mortality rate (IMR): probability of dying between birth and age 1 per 1000 live births.
