Definition of Indicators References 1. mCPR: % of women of reproductive age who are using (or whose partner is using) a modern contraceptive method at a particular point in Image: Contract of the productive age who are using (or whose partner is using) a modern contraceptive method at a particular point in														
contracepti 3. demand who are cu 4. Unintend or wanted t 5. unsafe al modern cor 6.Facilities 7. Method a 8. Total fert subject duri	 time. time. 1 Indicators 1 to 7 2. unmet need: % of fecund women of reproductive age who want no more children or to postpone having the next child, but are not using a contraceptive method, plus women who are currently using a traditional method of family planning. 3. demand satisfied: percentage of women (or their partners) who desire either to have no additional children or to postpone the next child and who are currently using a modern contraceptive method. 4. Unintended pregnancies: Nb of pregnancies that occurred at a time when women (and their partners) either did not want additional children or wanted to delay the next birth. 5. unsafe abortion: Nb of unsafe abortions that did not occur during a specified reference period as a result of the protection provided by modern contraceptive use during the reference period. 6.Facilities stocked out: % of facilities stocked out of each type of contraceptive offered, on the day of assessment. 7. Method availability: % of primary (resp. seconday/tertiary) service delivery points with at least 3 (resp. 5) modern methods of contraception available on day of assessment. 8. Total fertility rate: Average nb of children a hypothetical cohort of women would have at the end of their reproductive period if they were subject during their whole lives to the fertility rates of a given period and if they were not subject to mortality. 9. Adolescent birth rate (ABR): Nb of births to adolescent females, aged 15-19 occurring during a given reference period period period period period period period and if they were not subject to mortality. 9. Adolescent birth rate (ABR): Nb of births to adolescent females, aged 15-19 occurring during a given reference period pe													

100 000 live births. 11. Infant mortality rate (IMR): probability of dying between birth and age 1 per 1000 live births.
