Republic of South Sudan
Measles Outbreak and Response Weekly Situation Update

Issue number 26
Issue Date 23 August 2023
Epidemiological week Week 33 (August 14 - 20, 2023)

Suspected Measles Cases
New (9) cases with date of onset in week 32
Cumulative (9,873)

Lab Confirmed Cases
New (0)
Cumulative (816)

Deaths
New (1)
Cumulative (185)

* Above data is cumulative from 2022

Background

For Epi week 33, year 2023, 5,725 suspected measles cases were reported, with 424 (7.4%) lab-confirmed and a case fatality rate of 2.5.

After the Integrated Measles Campaign, responsive initiatives were conducted across five counties: Rubkona, Renk, Aweil East, North, and West in response to the outbreaks reported amongst the returnees from Sudan.

Despite observing a downward trajectory in the suspected measles cases for the last six epi-weeks (27-32), 669, 250, 219,162, 71, and 54, respectively, the persisting outbreak risks demand continued attention.

Epi weeks 30-33 data shows four counties with confirmed outbreaks and eleven counties reporting suspected cases, warranting further investigation and laboratory validation.

Key weekly Situation Update as of 20 August 2023

- Nine (9) newly suspected cases were reported this week from Renk (1) and Ayod (8), while 135 retrospective cases were received for weeks 28-32.
- No laboratory-confirmed case has been reported since week 31 (4 cases)
- The last confirmed outbreak was 9 cases in week 29 from Fangak, with a response been planned
- One new death in the reporting week from Ayod. However, data on 11 deaths were received from Juba and Ayod covering weeks 29-32.
- Four (4) counties (Kapoeta South, Jur River, Melut, and Aweil East) have laboratory confirmed Measles outbreaks as of Epi week 30.
- Renk, Ulang, Kajo-Keji, Yei, Terekeka, Rubkona, Juba, Leer, Fangak, Ayod and Aweil West continue to report suspected cases and need to collect samples as per the protocol.

Out of the 5,725 suspected measles cases, 424(7.4%) are lab-confirmed, 1,306(22.8%) epi-linked, 3,773(65.9%) clinically compatible, and 222(3.9%) discarded cases have been reported from epidemiological week 1 to week 33, 2023. A total of 25 rubella positive cases from the discarded (negative measles cases) cases.

A total of 140 measles-related deaths were reported since January 2023. 72%(101) were among clinically compatible cases whereas 28%(39) occurred among the epi-linked cases.

**Note:** Measles cases have been reported from different counties throughout 2023. The observed peaks are driven by different counties that experienced surge in measles cases at different times. The Sudan crisis started in week 14 with the influx of returnees and refugees since then. The nationwide MFUPC also took place from week 17-20.

**Coordination**

- The Incident management structure remains in place and lead by the MOH
- The vaccination response and the measles outbreak post-Sudan crisis plan developed and shared with partners.
- The country has finalized a budget for the Measles outbreak component of the Sudan crisis
- Plans for an IAR ongoing.

**Surveillance and Laboratory**

- Enhanced surveillance ongoing in silent counties
- Sample collection for all counties that last had measles outbreak confirmed in the last 4 weeks to track the Measles epidemiology.

</tbody>
</table>

**Note:** More than half (3,866 (68%)) of all the measles cases are children below 5 years of age. The case fatality rate is highest (3.0%) among children age 1-4 years. Most (1,061 cases) out of the 140 reported deaths were among children below age 5 years.

**Figure 3: Percentage distribution of measles cases and their vaccination status: 2023**

**Note:** Generally, 4,585 (80%) were unvaccinated (zero, unknown) including 3,045 (66%) children <5 years. Among children less than one year old (1,061 cases), 80% (853 cases) have not been vaccinated against measles compared with 208 (20%) vaccinated. This trend is observed across all the age groups.

Measles Outbreak and Response Weekly Situation Update

**Case Management**

- Enhance surveillance for VPDs, especially at the points of entry for the refugees, returnees from Sudan, and in the silent counties
- Ensure weekly reporting (including zero dose reporting where applicable)

<table>
<thead>
<tr>
<th>Vaccinations</th>
</tr>
</thead>
<tbody>
<tr>
<td>• A total of 15 counties were targeted for a reactive campaign, and 14 counties targeted for POE/Transit post-vaccination</td>
</tr>
<tr>
<td>• National EPI TWG endorsed the above plan (4 counties (Juba, Ayod, Longechuk and Rubkona, with secured funding from WHO, UNICEF and MEDAIR).</td>
</tr>
<tr>
<td>• Approaching partners to support/implement the campaign in the remaining counties, information shared at the HCC and other forums</td>
</tr>
<tr>
<td>• Preparation for the implementation in 3 counties ongoing, with MEDAIR already implementing in Ayod</td>
</tr>
</tbody>
</table>

**Demand Generation/Communication**

- Demand generation activities ongoing for the planned mop up and reactive campaigns as well as routine immunization (radio talk shows and jingle broadcast)

**Operational challenges and gaps**

- Inadequate detailed investigation of suspected measles cases and deaths in counties reporting
- Inadequate sample collection for laboratory confirmation and classification cases of suspected measles cases
- A high proportion of unvaccinated/unknown status children (80%) was detected among the cases, noting poor quality of investigations and gaps in immunization especially among the returnees and refugees.
- Late and constant retrospective reporting of suspected cases
- Incomplete and inaccurate filling of line lists

**Way Forward**

- MOH and partners to support planned mop up campaign and other measles activities
- State and County MOH to continue weekly reporting of measles cases (including zero reporting where applicable)
- Prompt detection and management of measles cases
- Blood samples to be collected from suspected cases, in counties that continue to report and the lab confirmation is beyond 4 weeks to monitor the epidemiology
- Collection of nasopharyngeal swaps from new cases
- Strengthen routine immunization at POEs, and within the community
- Prioritize case management to reduce morbidity and mortality.
- Enhance the risk communication and community engagement on health and help seeking behaviour.
