Date: 09 January 2024

Background

On 14 Dec 2023, an 18-year-old male from Gangura center village in Gangura Payam, Yambio County, developed an illness characterized by generalized body weakness, headache, epigastric discomfort, Fever, and vomiting.

- The patient was initially diagnosed with typhoid and put on treatment on the same day (14 Dec 2023).
- Upon completion of treatment for typhoid, his mother reported that he had not improved. On 21 December 2023, upon assessment at a health facility, he had vomiting of blood and jaundice. Suspecting viral haemorrhagic Fever, he was isolated at the health facility, and a sample was taken for further investigation. It tested positive for Yellow Fever on 24 December 2023 at the National Public Health laboratory.
- Yambio County, where the first Yellow Fever was reported, is 445 km from Juba.

Map 1. Location of Yellow fever outbreak in South Sudan

In addition to Yambio, suspected cases of Yellow Fever have been reported in two counties of Western Equatoria state near Yambio County: Nzara County and Tambura County.

Current update as of 09 January 2024

Coordination

- Hon. Yolanda Awel Deng Juach, Minister of Health of the Republic of South Sudan, declared the Yellow Fever outbreak in South Sudan Western Equatoria State and gave a press release to the media house on 06 January
- The National Ministry of Health (MOH) and the State Ministry of Health (SMOH), with support from WHO and partners, are providing operational and strategic guidance to the ongoing Yellow Fever outbreak response.
- The PHEOC has been activated to facilitate the coordination of activities. A daily coordination meeting with stakeholders and key partners is being conducted at the PHEOC.

Situation update on the Yellow Fever outbreak in Western Equatoria State, South Sudan Date: 09 January 2024 **Situation Report Number 018**

The following pillars were established at the national level to support the investigation and response: Coordination, Surveillance and Reporting, Laboratory, Vaccination, Case Management, Infection Prevention and Control, Risk Communication and Community Engagement (RCCE), Vector Control and Logistics.

- Similar coordination structures have been activated at the state and county levels.
- Pillar leads and co-leads have been identified and requested to update the National Steering Committee daily.
- An incident action plan was prepared for the response.

Surveillance, Laboratory, and Reporting

- Two (02) yellow fever Suspected cases were reported from Tambura in the last 24 hours.
- A cumulative of Twenty (20) Yellow Fever cases (19 Suspect and 01 Confirmed) were reported as of 09 January 2024.
- Of suspected cases, six (06) were death reports.
- All cases were reported from three counties of Western Equatoria state: Yambio County (11), Nzara County (04) and Tambura County (05)
- From reported cases, 55% (11) were from urban and 45% (09) were from
- Of the reported cases 65% (13) were males, and females accounted for 35% (07).
- The age range of the cases was from 02 to 58 years.
- The most common signs and symptoms observed were Fever, headache, epigastric pain, vomiting, jaundice, and bleeding from the mouth/nose.
- The first alert was reported on 21 December 2023. The NPHL received the sample from the first reported suspected case on 22 December 2023. Laboratory investigations were conducted, and it tested positive for Yellow Fever by RT-PCR on 24 December 2023.
- To ensure quality control, the samples were sent to the Uganda Virus Research Institute (UVRI) for further analysis, and the result was the same as the NPHL result.
- Further sample collection from suspected cases and laboratory testing have continued.
- A rapid response team is on the ground conducting an outbreak investigation, including an active case search.

Yellow fever reported cases by County

Logistics and Supplies	Hillary Hakim	WHO	

Challenges

- Limited partners on the ground to support the response.
- Community perceptions regarding patients with jaundice, particularly their preference for traditional healers.
- Limited capacity to manage severe cases at the available health facilities and difficulty in follow-up of suspected cases at home.
- Weak surveillance in some counties in Western Equatoria State.
- Limited capacity at health facilities for sample collection, packaging, and transportation.

Situation update on the Yellow Fever outbreak in Western Equatoria State, South Sudan Date: 09 January 2024

Situation Report Number 018

Next steps

- Strengthen coordination at the national, state, and county levels.
- Continue monitoring and analysis of surveillance data, active case search, investigation of alerts.
- Conducting Entomological surveillance in the affected areas
- Capacity building for health workers on sample collection, packaging, transportation, case management, and case detection and reporting.
- Finalize the Yellow Fever outbreak response plan.
- Follow up vaccine requested ICG
- Disseminate information, education, and communication materials on Yellow Fever transmission and control.
- Engage more partners and other stakeholders for resource mobilization.
