

# National Mpox Situation Report

## 1 Summary

Total Cases	New Last 24h	Number of Deaths	Case Fatality Rate (%)
6,578	0	44	0.67

### Key Points:

- Epidemic remains active.** The epidemic remains active and evolving, with varying transmission dynamics across the country. While there is a notable decline in weekly incident cases, sustained transmission is ongoing in identified hotspots. To date **79% (115/146)** of districts reported at least one case since the beginning of the outbreak and **38% (55/146)** reporting new cases in the past **21 days**.
- High-risk mortality observed.** A total of **44 deaths** have occurred among confirmed cases, **over half (52.3%)** of whom were **co-infected with HIV**, underscoring vulnerabilities in this population. Persons co-infected with HIV had four times higher odds of severe Mpox disease
- Young adults are disproportionately affected.** Attack rates are highest among **females aged 25–29 (2.8/100,000)**. In the last 3 weeks, there has been a shift in the most affected among males from 35-39 to males aged 44–49 (**4.2/100,000**). This may be indicative of a shift in the transmission dynamics among males.
