# **National Mpox Situation Report**

### 1 Summary

Total Cases	New Last 24h	Number of Deaths	Case Fatality Rate (%)
6,862	7	44	0.64

#### **Key Points:**

- 1. **Epidemic remains active.** The epidemic remains active and evolving, with varying transmission dynamics across the country. While there is a notable decline in weekly incident cases, sustained transmission is ongoing in identified hotspots. Todate 81% (118/146) of districts resported at least one case since the beginning of the outbreak and 42%(61/146) reporting new cases in the past 21 days.
- 2. New districts affected. Of the 7 districts registering cases in last 24 hours 86% (6/7) were cases registered in South Western Uganda. Two additional districts in South western Uganda including Sheema and Kiruhura have reported new cases.
- 3. High-risk mortality observed. A total of 44 deaths have occurred among confirmed cases, over half (52.3%) of whom were co-infected with HIV, underscoring vulnerabilities in this population. Persons co-infected with HIV had four times higher odds of severe Mpox disease
- 4. Young adults are disproportionately affected. Attack rates are highest among females aged 24–34 (AR: 2.1/100,000). Among males, the most affected agegroup is 35-39 (AR: 3.2/100,000).
