# Project Brief : Strengthening Health Security in Tanzania

## Introduction

The United Republic of Tanzania has been awarded US\$25 million from the Pandemic Fund to enhance national health security and pandemic preparedness.

This core funding is further supported by US\$7 million in co-investment and US\$6.7 million in co-financing, mobilized through a strong coalition of technical and financial partners.

## Objective

To build resilient health systems capable of detecting, preventing, and responding to public health threats, while ensuring inclusion of vulnerable and marginalized populations.

**USD25m**

## Expected Results by 2027

Integrated disease surveillance system operational nationwide

Prompt outbreak detection and response

Stronger community engagement in health emergencies

Enhanced regional and global health security contributions

## Strategic Focus

Strengthen disease surveillance and early warning systems

Enhance biosafety and infection prevention

Improve laboratory and specimen referral networks

Promote One Health integration across human, animal, and environmental sectors

## Implementation Period

**2025 – 2027**

## Government Leadership

Ministry of Health Tanzania (Lead)

President's Office Regional Administration and Local Government

Prime Minister's Office

Ministry of Livestock and Fisheries

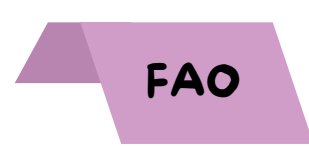

## Implementing Partners

Strengthening human health systems and emergency readiness

Leading risk communication and community engagement

Supporting animal health and One Health coordination

***This investment is a critical step in protecting Tanzanians from future pandemics while reinforcing national and global readiness to prevent and respond to health emergencies.***
