The Côte D’Ivoire - Adibjan GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, environmental tobacco smoke exposure (ETS), cessation, media and advertising, and school curriculum. These determinants are components Côte D’Ivoire - Adibjan could include in a comprehensive tobacco control program.

The Côte D’Ivoire - Adibjan GYTS was a school-based survey of students in 6-2ème, 1ère and Terminale, conducted in 2003.

The two-stage cluster sample design was used to produce representative data for Côte D’Ivoire - Adibjan. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 86.1%, and the overall response rate was 86.1%. A total of 2,094 students aged 13-15 participated in the Côte D’Ivoire - Adibjan GYTS.

### Prevalence
- 35.4% of students had ever smoked cigarettes (Boy = 50.0%, Girl = 18.5%)
- 16.5% currently use any tobacco product (Boy = 21.7%, Girl = 10.3%)
- 13.6% currently smoke cigarettes (Boy = 19.3%, Girl = 7.1%)
- 5.1% currently use other tobacco products (Boy = 5.6%, Girl = 4.4%)
- 11.2% of never smokers are likely to initiate smoking next year
